

LATEST DROP / PROJECT BOOK

WHAT SHOULD BLUORNG MAKE NEXT?

BLUORNG blends global aesthetics with local sensibilities.
BLUPRINT helps its team decide what to make next for
Instagram and Meta ads, and turns every idea into a brief they
can shoot.

[READ THE PROJECT](#)

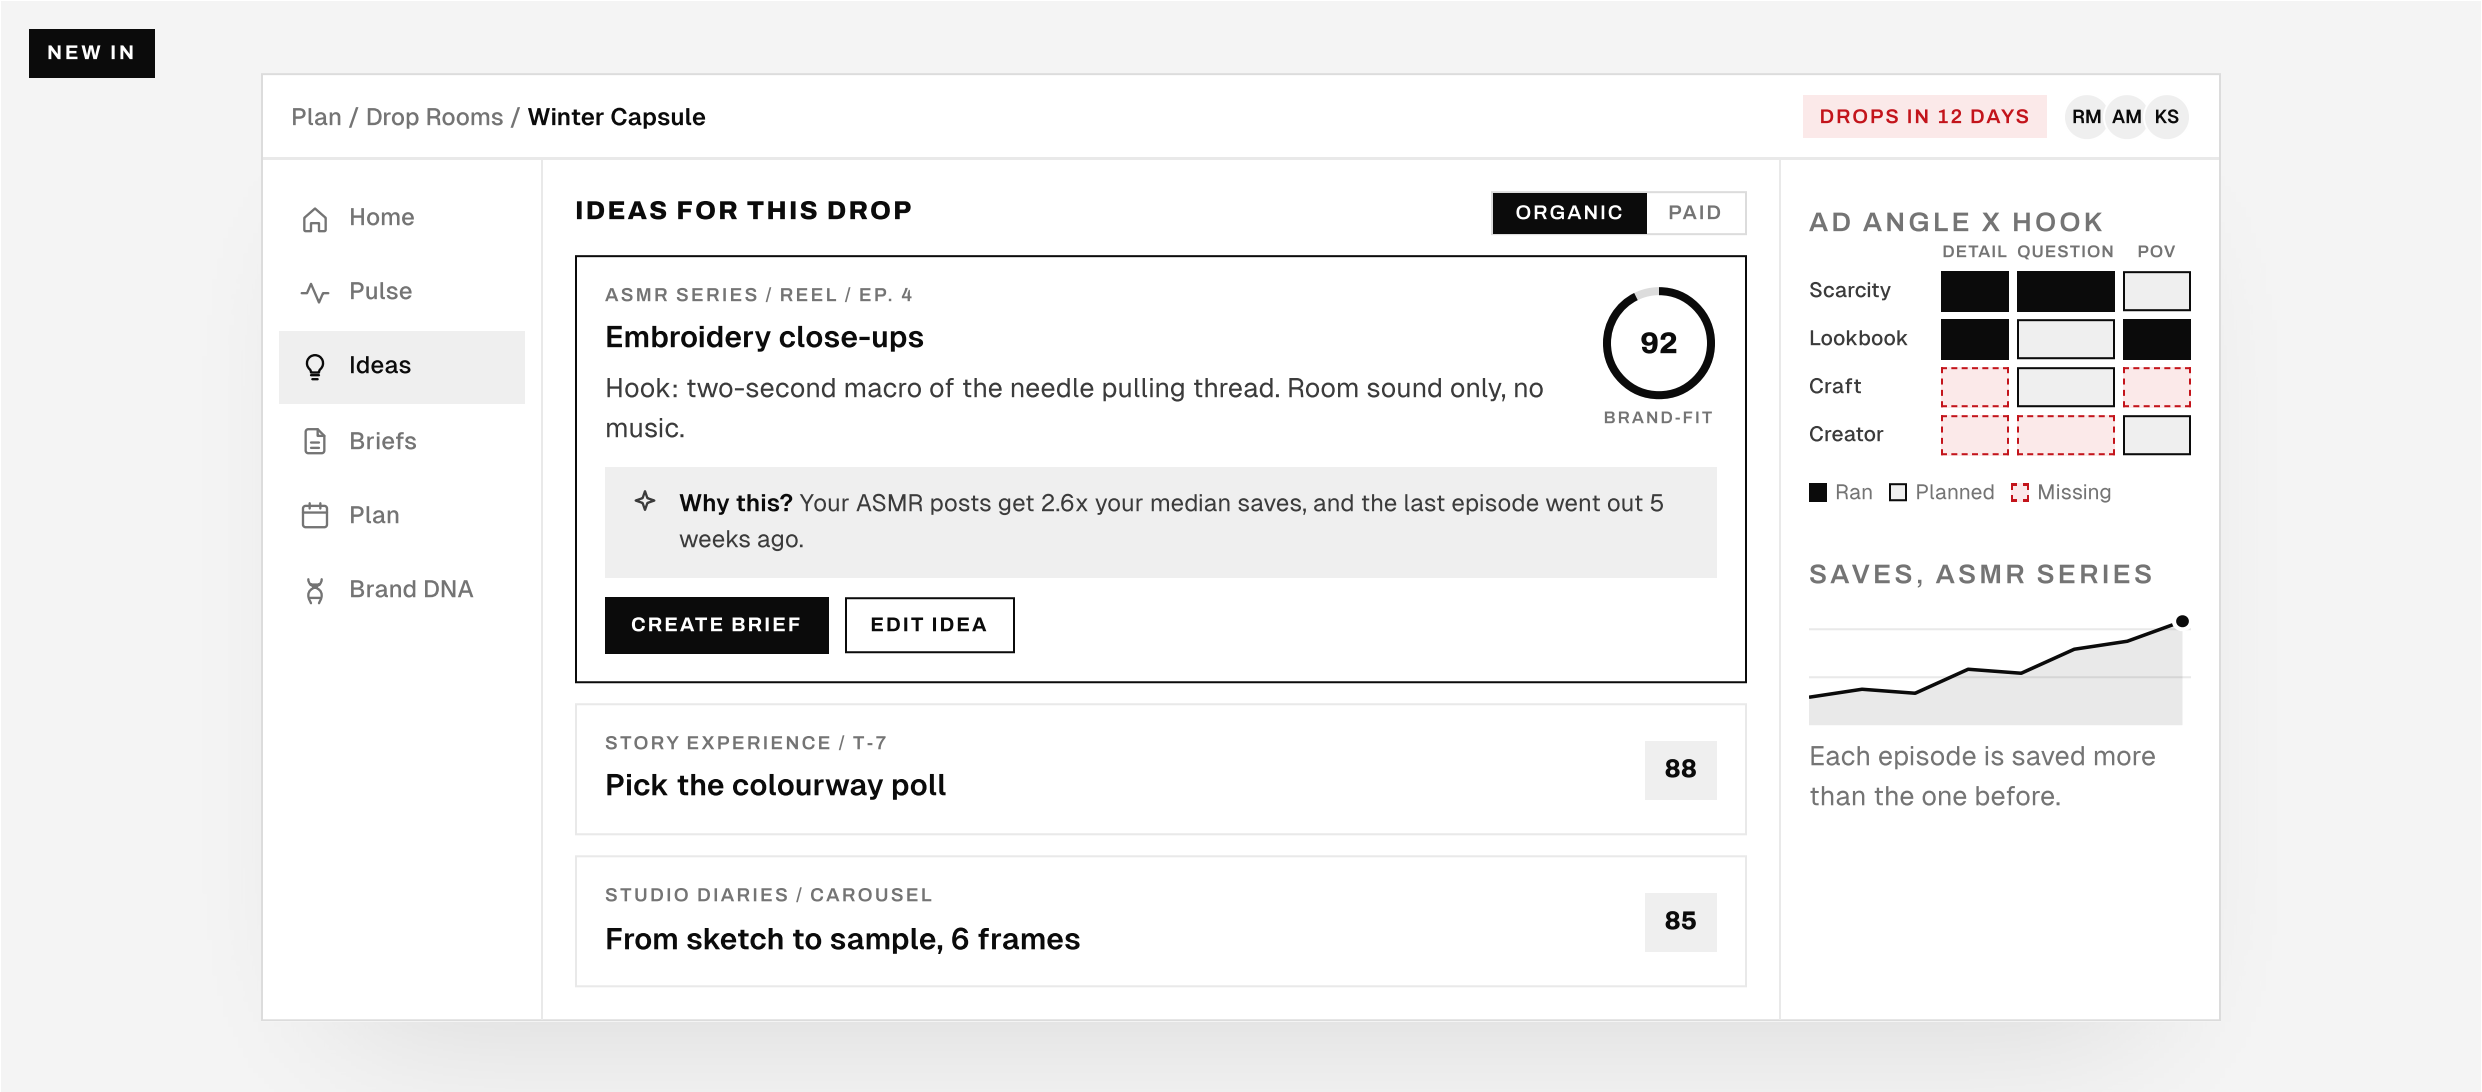

IN COLLABORATION WITH
BLUORNG, NEW DELHI

UI/UX GRADUATION PROJECT / 8 CHAPTERS

LATEST DROP: THE PRODUCT

4 MODULES / CONCEPT SCREENS

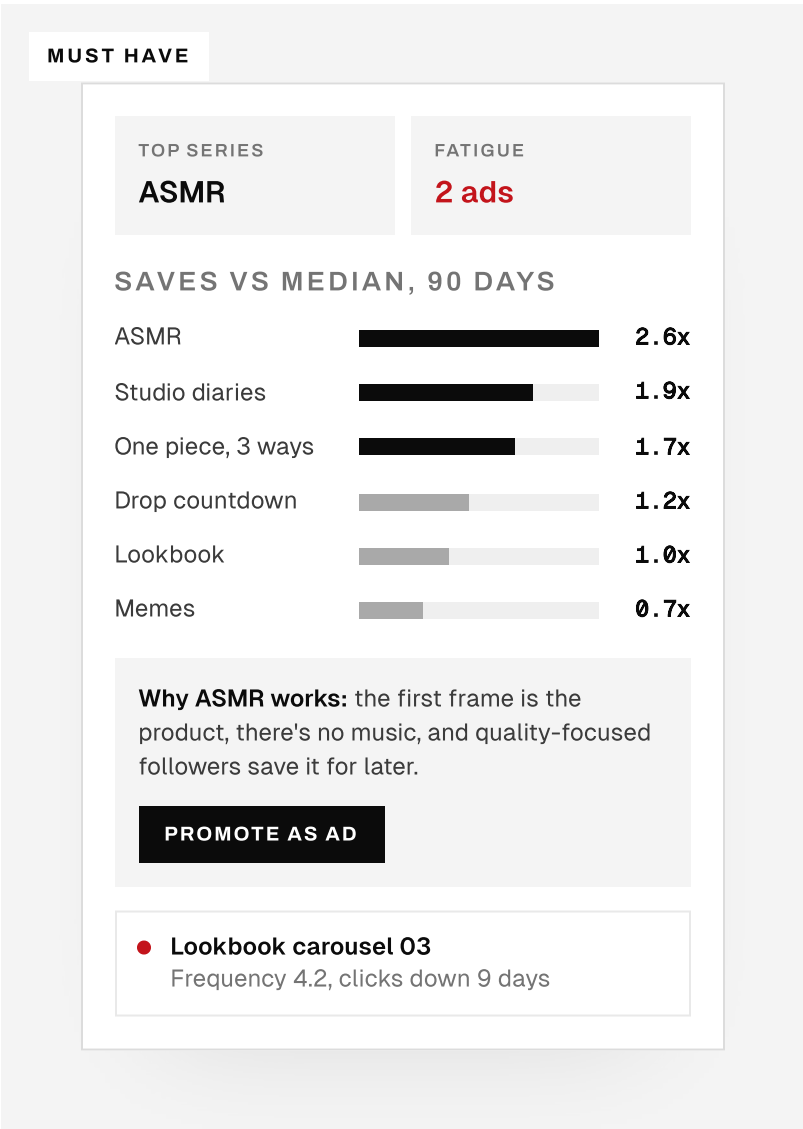

Pulse explains what worked. Ideas suggests what to make next. Set Mode carries it onto the shoot. Approvals keeps the founders in the loop without WhatsApp.

IDEAS

MODULE 02 / CORE

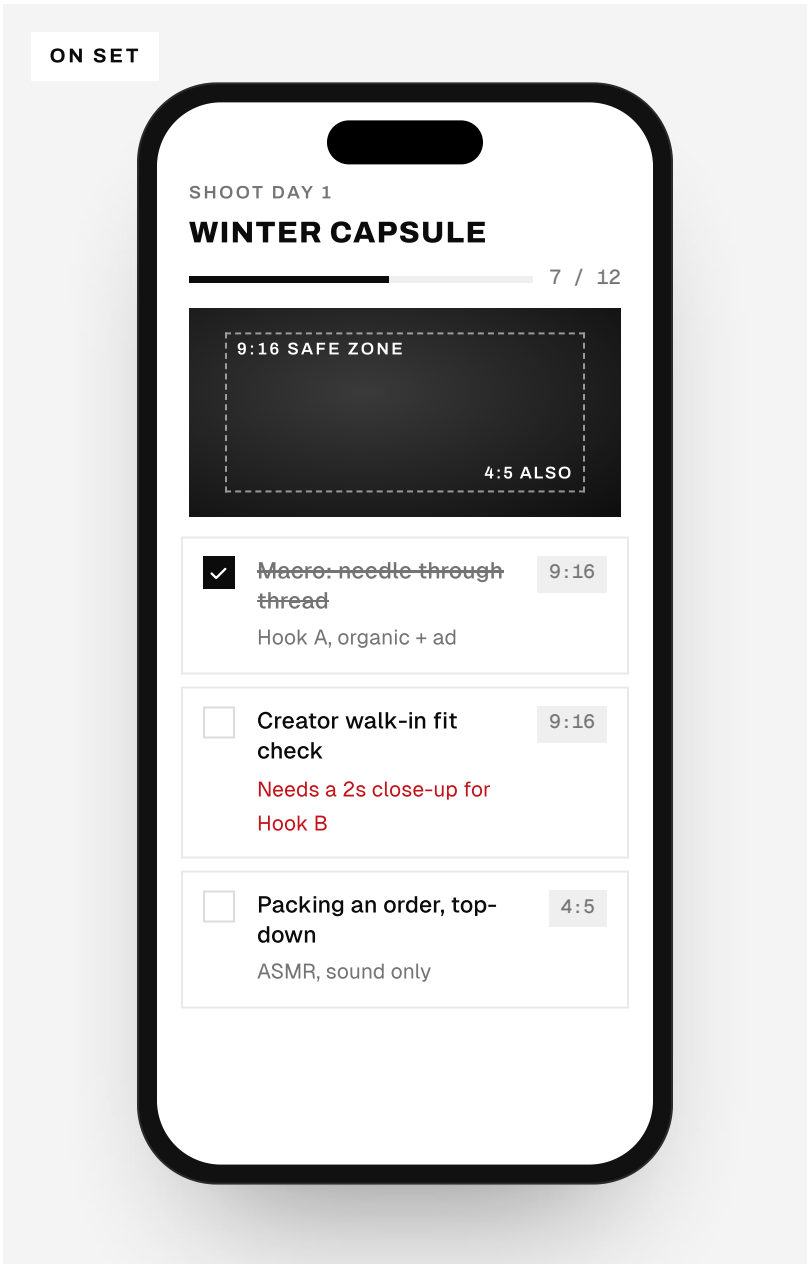

On-brand suggestions for Instagram series and Meta ad angles, each with a hook, a reason and a brand-fit score.

PULSE

MODULE 01

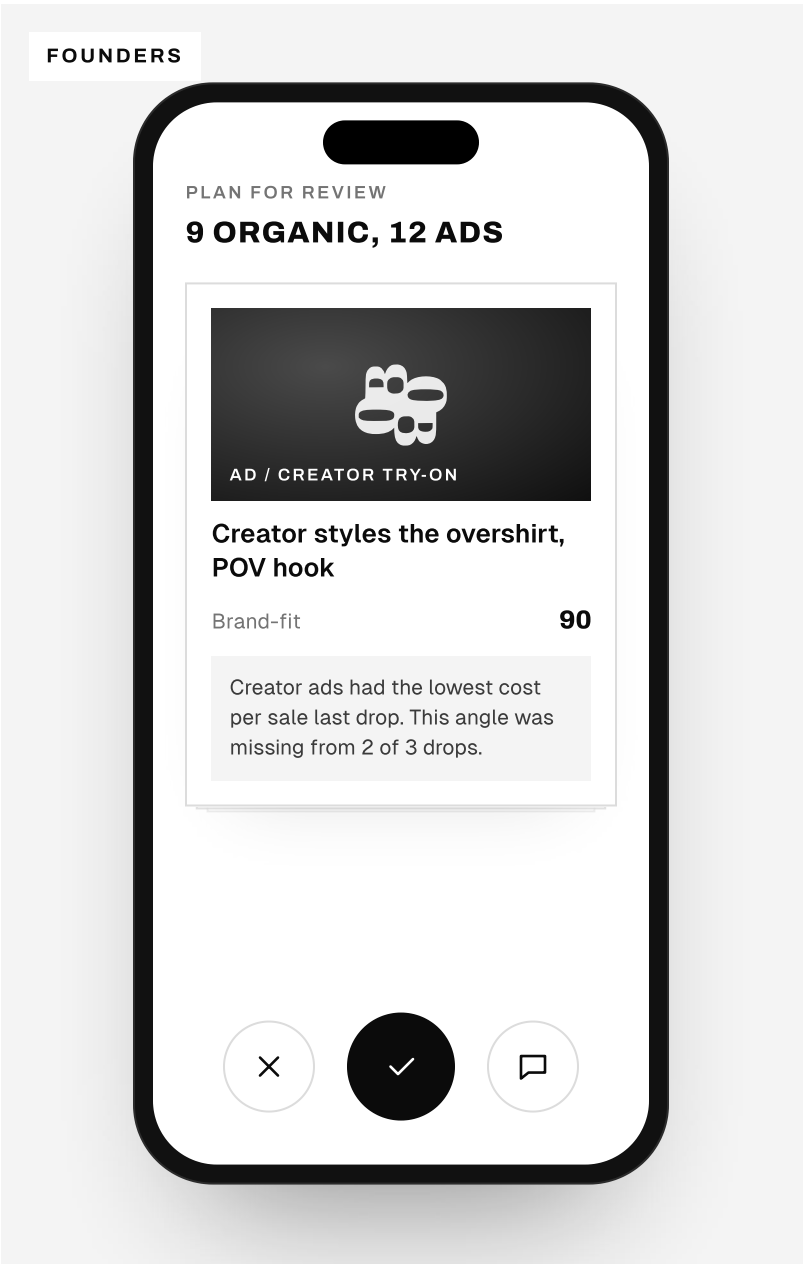

Results grouped by type of content, so the team sees which series work, and why.

SET MODE

MODULE 03

One merged shot list for organic and ads, on the cinematographer's phone.

APPROVALS

MODULE 04

Founders swipe through the plan with the reason and brand-fit on every card.

Bluorng

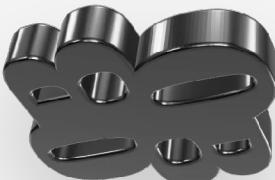

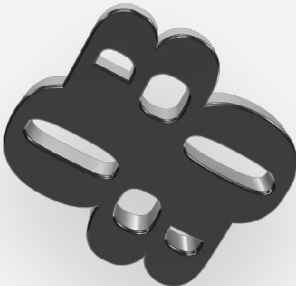

BLUORNG, pronounced Blue~Orange, blends global aesthetics with local sensibilities, and sits among the top streetwear brands in India. Every drop starts with a feed. This project is about what goes on it.

NEW DELHI / MUMBAI / ONLINE

THE COLLECTION

8 CHAPTERS / PROPOSAL TO LABELING

Every stage of the project, from the proposal to the proposed solution. Pick a chapter, or scroll through all of them.

PART 01  THE BRIEF 2 STAGES	PART 02  SECONDARY RESEARCH 3 STAGES	PART 03  SYSTEMS AND PROBLEMS 4 STAGES	PART 04  PRIMARY RESEARCH 8 STAGES

THE BRIEF

2 STAGES

What we're building, who it's for, and the 20-week plan to get there.

PROJECT PROPOSAL

PROJECT TIMELINE

1. PROJECT PROPOSAL

1.1 WORKING TITLE

BLUPRINT: a content intelligence and ideation platform that helps BLUORNG decide what to make for Instagram (organic) and Meta Ads (paid).

Name logic: "BLU" (from BLUORNG) + "PRINT" (blueprint): a blueprint for every piece of content before a camera is switched on.

1.2 SPONSOR / CONTEXT

- **Industry partner:** BLUORNG, a New Delhi streetwear label (founded 2020 by Siddhant Sabharwal and Mokam Singh). Named GQ India's *Streetwear Label of the Year* for 2023. It runs stores in Delhi NCR and Mumbai and sells online, and it has done brand collaborations such as Jägermeister and Budweiser.
- **My role inside the partner:** I work inside BLUORNG's content team, which lets me observe directly how content gets planned, shot, posted and promoted. In this project I am the **UI/UX designer:** I research the content workflow and design a digital product that improves it.
- **Mentors:** Industry mentor (BLUORNG brand/marketing lead) + University guide.

Confidentiality: Any internal data (Instagram Insights, Meta Ads Manager numbers, sales figures, internal docs) must only be used with the written OK of the industry mentor. Anonymise or index numbers (e.g. "Reel A = 100, Reel B = 240") where needed.

1.3 BACKGROUND

BLUORNG grew from an Instagram-first niche label into a fast-rising fashion brand. Its content is a mix of:

- **Organic content:** drop teasers, lookbooks, campaign films, behind-the-scenes, store-launch content, collaborations, community/culture posts.
- **Inorganic (paid) content:** Meta ads (Instagram + Facebook) for drops, retargeting, store footfall and evergreen products.

Today, *what to make next* is decided mostly from experience, gut feel, trend-watching and scattered numbers. The numbers sit in Instagram Insights, Meta Ads Manager and Shopify, while the conversations happen on WhatsApp and in meetings. Nothing connects "what we posted / ran" to "what worked / sold" to "what we should make next".

1.4 PROBLEM (INITIAL BRIEF)

Content teams at drop-led streetwear brands like BLUORNG don't have a structured, evidence-backed way to decide **what content to produce**, both for organic Instagram (formats, series/IPs, stories) and for Meta ads (creative angles, hooks, variations). As a result, creative effort and ad spend are spent on guesswork, wins are not repeated systematically, and organic and paid content run as separate worlds.

1.5 AIM

Design a platform that turns **performance data + brand identity + trend signals** into **clear, brand-safe content recommendations and ready-to-shoot briefs**, for both organic and paid content.

1.6 OBJECTIVES

1. Understand how BLUORNG's content and performance-marketing teams currently ideate, plan, produce, publish and evaluate content.
2. Identify the key pain points and decision gaps in that workflow.
3. Understand what BLUORNG's audience actually engages with, and why.
4. Define a content taxonomy (formats, IPs/series, hooks, angles) the platform can learn from.

5. Generate, evaluate and select a design concept (3 concepts → 1 final).
6. Design the IA, flows, wireframes, UI system and prototype, and test them with real users.

1.7 SCOPE

IN SCOPE	OUT OF SCOPE
Ideation & recommendation for Instagram organic (Reels, carousels, stories, series/IPs like ASMR, story experiences, studio diaries)	Actually building the ML model / backend
Ideation & recommendation for Meta Ads (angles, hooks, formats, variations, fatigue alerts)	Auto-posting / ad buying inside the tool
Insight layer (what worked and why), brief generation, content calendar around drops	Other platforms (YouTube, X); these appear only as "future scope"
Desktop web app (planning) + mobile companion (on-shoot use)	E-commerce site redesign

1.8 EXPECTED OUTCOME

- A researched, tested **hi-fidelity prototype** of BLUPRINT (web + mobile companion).
- A design system and documented IA.
- A validated set of design recommendations BLUORNG can use even without building the product.

1.9 METHODOLOGY

Double Diamond: Discover (secondary + primary research) → Define (synthesis, personas, problem statement) → Develop (ideation, concepts, IA, wireframes) → Deliver (UI, prototype, usability testing).

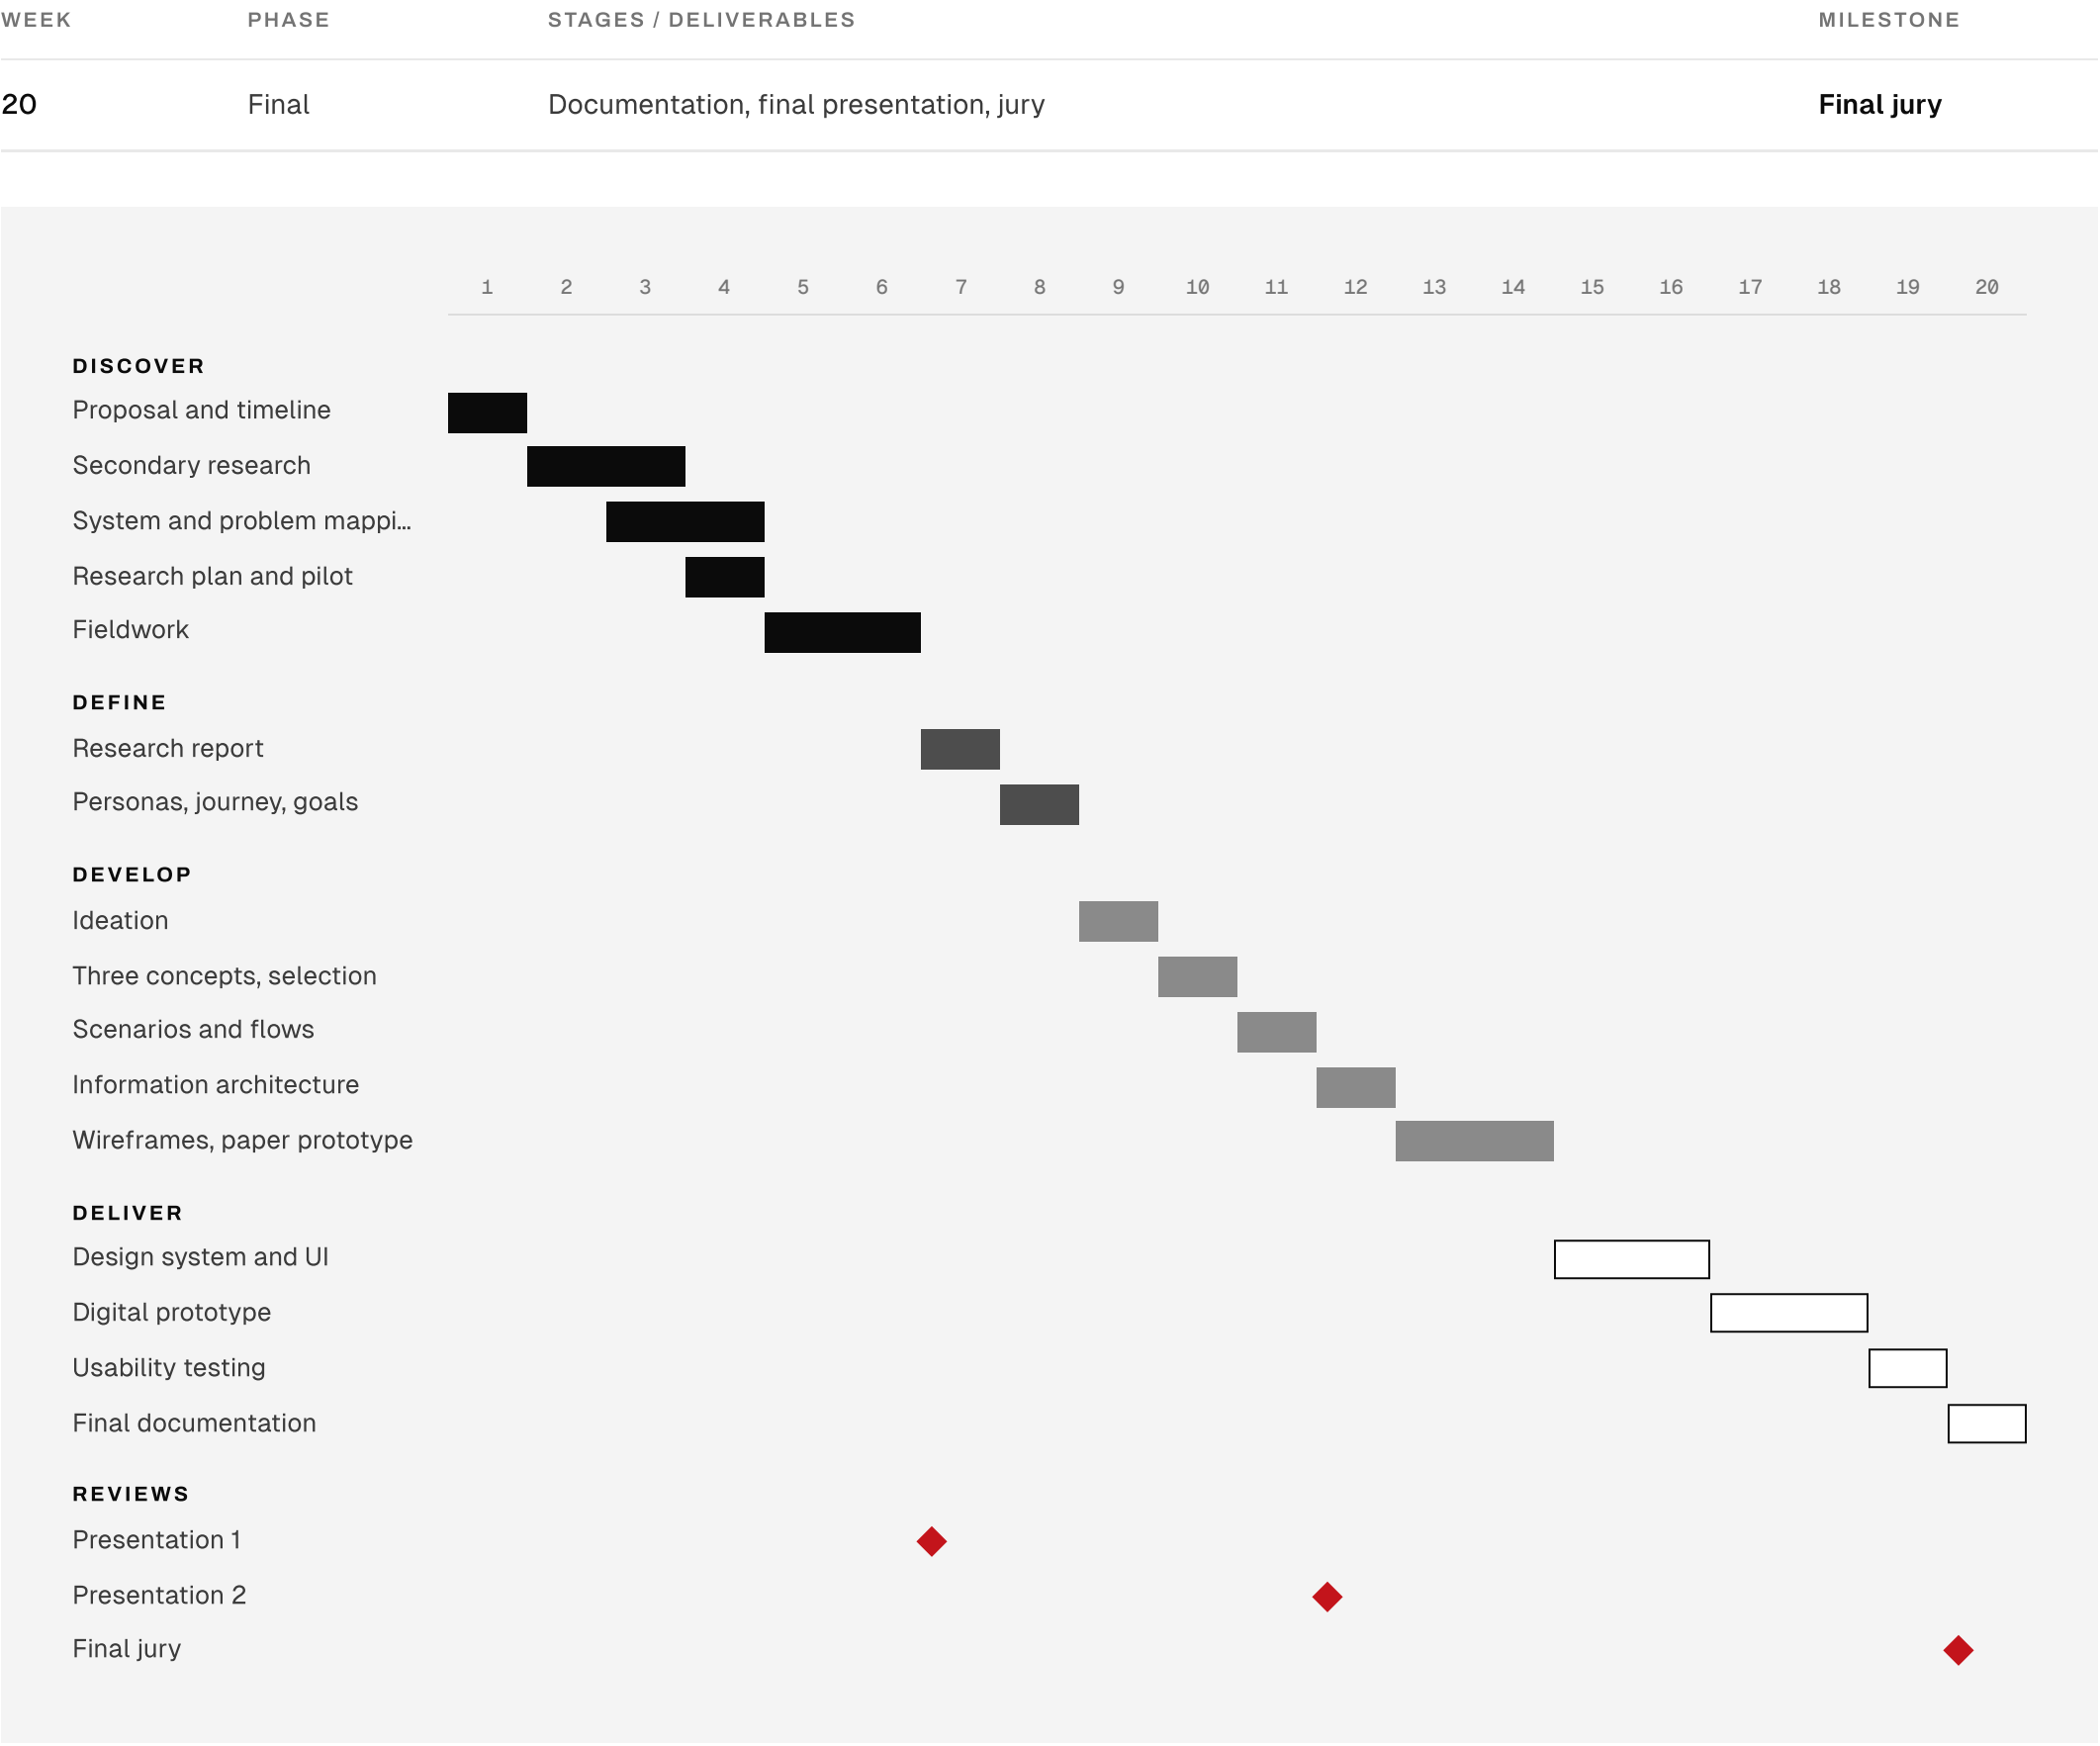

1.10 WHY THIS MATTERS (VALUE)

FOR BLUORNG	FOR THE TEAM	FOR THE AUDIENCE
Less wasted production & ad spend; more repeatable wins	Faster decisions, clearer briefs, less back-and-forth	More content they actually want: less noise, more culture

2. PROJECT TIMELINE

Adjust the week numbers to your college calendar. Presentation 1 = end of research, Presentation 2 = final concept.

WEEK	PHASE	STAGES / DELIVERABLES	MILESTONE
1	Kick-off	Project proposal, timeline, mentor sign-off, confidentiality agreement	Proposal approved
2–3	Discover: secondary	Domain study, literature review, competitor/tool analysis	
3–4	Discover: system	Stakeholder map, system map, problem mapping, problem area & target users	
4	Plan	Primary research plan, questionnaire draft, pilot test (3–5 people) , revise	
5–6	Discover: primary	Survey (team/industry + audience), interviews, focus group, shadowing a drop week	
7	Define	Primary research report, data charts, inferences, redefined brief	Presentation 1
8	Define	Personas, empathy maps, user journey map, problem statement, design goals	
9	Develop	Ideation (brainstorming, brainwriting, SCAMPER, space saturation)	
10	Develop	Filtration (bullseye, priority matrix), 3 concepts , feasibility check, final selection with mentors	
11	Develop	User scenarios, storyboards, user/task flows, task analysis, feature mapping	
12	Develop	Information architecture: content strategy, sitemap, navigation, labeling	Presentation 2
13–14	Develop	Wireframes, paper prototype + quick test	
15–16	Deliver	Design system, UI elements, style guide, accessibility checks, grids	
17–18	Deliver	Wireflows + digital prototype	
19	Deliver	Usability testing (2 rounds) + iteration	

SECONDARY RESEARCH

3 STAGES

The brand, the market, the platforms, the existing tools, and twelve sources that shape the design.

- DOMAIN STUDY
- TOOL REVIEW
- LITERATURE REVIEW

Sources are listed at the end of this file. Figures from market-research firms and ad-tech vendors are **estimates**. Present them as "industry estimates", not facts, and cross-check before your final document.

3. DOMAIN STUDY

3.1 THE BRAND: BLUORNG

ATTRIBUTE	WHAT WE KNOW (SECONDARY SOURCES + INTERNAL OBSERVATION)
Founded	2020, New Delhi, by Siddhant Sabharwal & Mokam Singh (Pearl Academy alumni)
Positioning	Premium / luxury Indian streetwear. Design-led, strong visual storytelling
Recognition	GQ India <i>Streetwear Label of the Year</i> (2023)
Retail	Began as an appointment-only studio in Greater Kailash, Delhi → flagship in Gurugram → larger Mumbai store (reopened 2026) + online, ships worldwide
Price band	Premium: T-shirts in the few-thousand-rupee range, outerwear far higher (verify current prices on the site)
Business model	Drop-led: limited releases, sell-outs, scarcity and hype. Collabs (Jägermeister, Budweiser jersey collection)
Growth engine	Instagram-first: discovery, hype, community. Meta ads for conversion
Known challenge (per an agency case study)	Despite a lively social presence, brand recall was low and Instagram traffic was not converting to website sales at the needed rate

Add from inside: follower count, posting frequency, team size, monthly content volume, typical shoot cost, ad budget band (indexed if confidential).

3.2 THE MARKET

- Indian streetwear:** estimated at **USD 23.1 bn (2025)**, projected to reach about USD 43 bn by 2034 (~7.1% CAGR, Deep Market Insights). This is a single-firm estimate.
- Online fashion in India:** about **USD 11 bn**, projected at **USD 35 bn by 2028** (Entrepreneur India).
- D2C:** fashion is one of the largest D2C categories in India. Growth is driven by Instagram campaigns, creator collabs and **social-led drops** instead of seasonal calendars (Fibre2Fashion).
- Peer / competitor brands** (content benchmarks): Jaywalking, Almost Gods, Huemn, Capsul, Urban Monkey, Bonkers Corner, The Souled Store, Snitch (mass), plus global references (Fear of God Essentials, Corteiz, Represent, Aimé Leon Dore, Stüssy).

3.3 THE PLATFORM ECOSYSTEM

CHANNEL	HOW IT WORKS TODAY	IMPLICATION FOR CONTENT
Instagram organic	Reels, carousels, single images, stories, Broadcast channels, Collabs posts. Reach is algorithmic and driven by watch time, shares and saves	Hook in the first ~3–4 s matters. Shares/saves > likes. Series ("IPs") build habit and recall
Meta Ads	Advantage+ automation. Targeting is increasingly done by the creative itself ("creative is the new targeting")	The team's main lever is creative diversity : different angles, hooks and formats, not just different product shots
Creative fatigue	Performance drops as frequency rises (often flagged above ~3 frequency, or after weeks 3–4 of prospecting)	A pipeline of fresh variations is needed, and the team needs to know <i>when</i> to refresh

Key benchmark signals (directional):

- Fashion brands: **Reels ~1.9% engagement vs ~0.8%** for carousels/static, and higher reach per post (Dash Social fashion data via NetInfluencer).
- All industries / large accounts: **carousels often win** on engagement and reach (Socialinsider 2026; Dash Social H2 2025).
- Engagement is **declining year on year** across formats (Socialinsider).
- Meta reports **diversified creative can improve CPA by up to 32%** and incremental reach by 9% compared with similar-looking creative (via B&T / AdNews).
- UGC-style ads often beat polished brand ads on CTR/CVR for D2C (vendor data, figures vary by source).

Inference: No single format "wins". It depends on the brand, account size and goal. That is exactly why BLUORNG needs a tool that learns from **its own** data, not generic rules.

3.4 CONTENT TAXONOMY (WORKING VOCABULARY FOR THE PROJECT)

Organic formats & IPs (recurring series):

IP / FORMAT	DESCRIPTION	TYPICAL GOAL
Drop Countdown	Teasers, close-ups, "3 days left"	Hype, notify
Lookbook / Campaign Film	Hero visual storytelling	Brand, desire
ASMR series	Fabric, embroidery, zips, packing orders, store sounds	Saves, watch time, quality perception
Story Experience	Interactive stories: polls, quizzes, "pick the colourway", choose-your-fit	Engagement, research
Studio Diaries / BTS	Design → sampling → shoot	Craft, recall
One Piece, Three Ways	Styling guide	Saves, conversion
Fit Check / Street Style	In-store and on-street community fits	Community, social proof
Collab Universe	Brand × brand / artist content	Reach, new audiences
Culture / Memes	Trends, audio, inside jokes	Reach, shares
Founder POV	Story behind a collection	Trust, recall

Paid (Meta ads) creative angles:

ANGLE	EXAMPLE
Scarcity / Drop	"Drops Friday 8 PM. Limited units."
Craft & Quality	Macro fabric/detail video (ASMR-style)
Social proof	Store queues, creators wearing, sold-out stamps
UGC / Creator try-on	Creator styling the piece in their own voice
Lookbook carousel	Multi-product catalogue feel
Retargeting / DPA	Dynamic product ads for viewers and cart-abandoners
Store footfall	"Now open in Mumbai" with a map
Collab announce	Partner-brand co-branded hero

3.5 EXISTING TOOLS (COMPETITIVE / ANALOGOUS ANALYSIS)

TOOL	CATEGORY	ORGANIC	PAID	RECOMMENDS <i>WHAT TO MAKE?</i>	BRAND-SPECIFIC LEARNING	GAP FOR BLUORNG
Meta Business Suite / IG Insights	Native analytics	Yes	partial	No	No	Data only, no "so what"
Meta Ads Manager / Ads Library	Ads + competitor ads	No	Yes	No	No	Not built for creative ideation
Later / Hootsuite / Sprout / Iconosquare	Scheduling + analytics	Yes	partial	Limited (best time to post)	No	Scheduling-centric
Motion	Creative analytics	No	Yes	Partial (which hooks work)	Yes	Paid-only, expensive, no organic IPs
Foreplay	Ad swipe file / research	No	Yes	Inspiration only	No	Competitor-focused

TOOL	CATEGORY	ORGANIC	PAID	RECOMMENDS <i>WHAT TO MAKE?</i>	BRAND-SPECIFIC LEARNING	GAP FOR BLUORNG
Atria / Superscale / Segwise	Analytics → briefs → generation	No	Yes	Yes	partial	Paid-only, generic, not drop-culture aware
ChatGPT / generic AI	Text ideation	Yes	Yes	Yes (generic)	No	No data, no brand memory, off-brand ideas
Notion / Sheets / WhatsApp	Planning	manual	manual	No	No	Where planning actually happens today

Opportunity gap: No tool **joins organic + paid**, learns from a **brand's own performance**, protects **brand identity**, understands **drop calendars**, and outputs **shootable briefs** for a small creative team.

4. LITERATURE REVIEW

#	SOURCE	KEY IDEA	RELEVANCE TO BLUPRINT
1	Kaplan & Haenlein (2010), <i>Users of the world, unite!</i> , Business Horizons	Social media as a set of platforms built on user-generated content; brands must take part, not broadcast	Organic content must be participatory (Story Experience, UGC)
2	Berger & Milkman (2012), <i>What makes online content viral?</i> , J. of Marketing Research	High-arousal emotions (awe, excitement, amusement) drive sharing more than low-arousal ones	Recommendation engine should tag content by emotion/arousal , not just format
3	de Vries, Gensler & Leeflang (2012), <i>Popularity of brand posts on brand fan pages</i> , J. of Interactive Marketing	Vividness and interactivity of posts affect likes and comments differently	Tag posts by vividness (video/static) and interactivity (polls/questions)
4	Ashley & Tuten (2015), <i>Creative strategies in social media marketing</i> , Psychology & Marketing	Brands use different message strategies (functional, emotional, experiential, user-image)	Basis for the platform's creative-angle taxonomy
5	Kim & Ko (2012), <i>Do social media marketing activities enhance customer equity?</i> (luxury fashion), J. of Business Research	Entertainment, interaction, trendiness, customisation and word-of-mouth drive equity for luxury fashion	The five dimensions become content-goal tags for a premium brand
6	Godey et al. (2016), <i>Social media marketing efforts of luxury brands</i> , J. of Business Research	Social media efforts build brand awareness and image, which drive preference and loyalty	Supports measuring recall/brand-building , not only sales
7	Cialdini (1984/2021), <i>Influence</i> : Scarcity principle	Limited availability increases perceived value	Drop model: scarcity content must be timed and not overused (fatigue)
8	Lemon & Verhoef (2016), <i>Understanding customer experience throughout the customer journey</i> , J. of Marketing	Touchpoints across pre-purchase, purchase and post-purchase	Map content types to the audience journey (discover → desire → drop → wear → share)
9	Meta (2023–25), <i>Creative is the new targeting</i> / creative diversification guidance	Diverse creative improves CPA and reach. Similar openers are treated as near-duplicates	Paid module must push hook and angle diversity and flag sameness
10	Amershi et al. (2019), <i>Guidelines for Human-AI Interaction</i> , CHI	18 guidelines: make clear what the system can do, show why, support correction, learn from feedback	Core UX principles: explainable recommendations , editable, feedback loop
11	Davis (1989), <i>Technology Acceptance Model</i>	Adoption depends on perceived usefulness and ease of use	The team will only adopt it if it saves time and gives better ideas than WhatsApp + gut
12	Nielsen (1994), <i>10 Usability Heuristics</i>	Visibility, match with real world, control, consistency...	Evaluation framework for later usability testing

4.1 LITERATURE SYNTHESIS

- Content success is multi-dimensional:** format, emotion, interactivity, timing and creative angle all matter (2, 3, 4).
- Luxury/premium fashion has different goals:** brand equity and desire matter as much as clicks (5, 6), so the tool must not chase vanity metrics or cheapen the brand.
- Scarcity is powerful but fragile** (7). Drop content needs planning around a calendar.
- Paid performance now depends on creative variety** (9). Teams need help producing *different* ideas, not more of the same.
- AI recommendations must be explainable and controllable** (10, 11), otherwise creative teams reject them.

SYSTEMS AND PROBLEMS

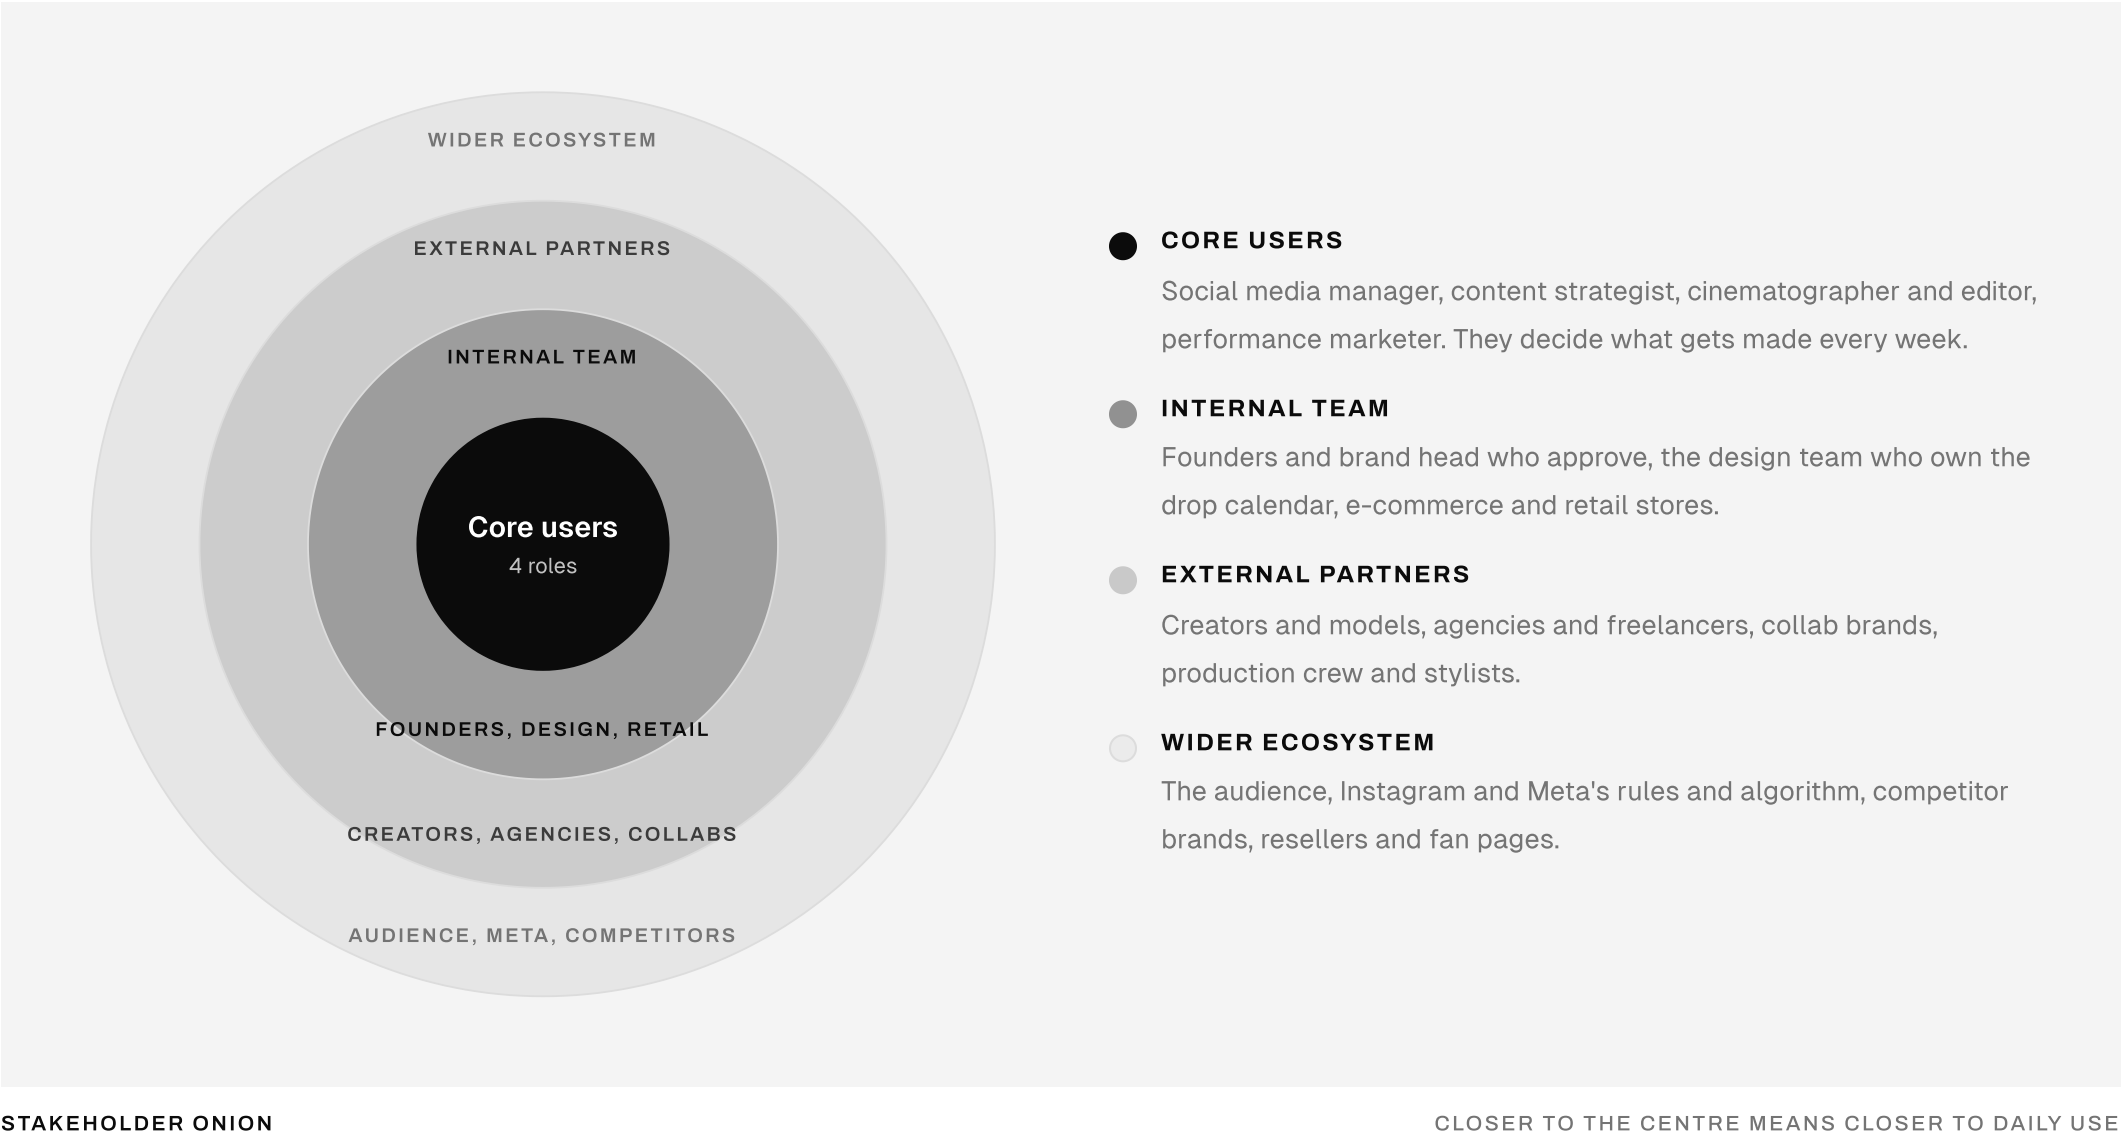

4 STAGES

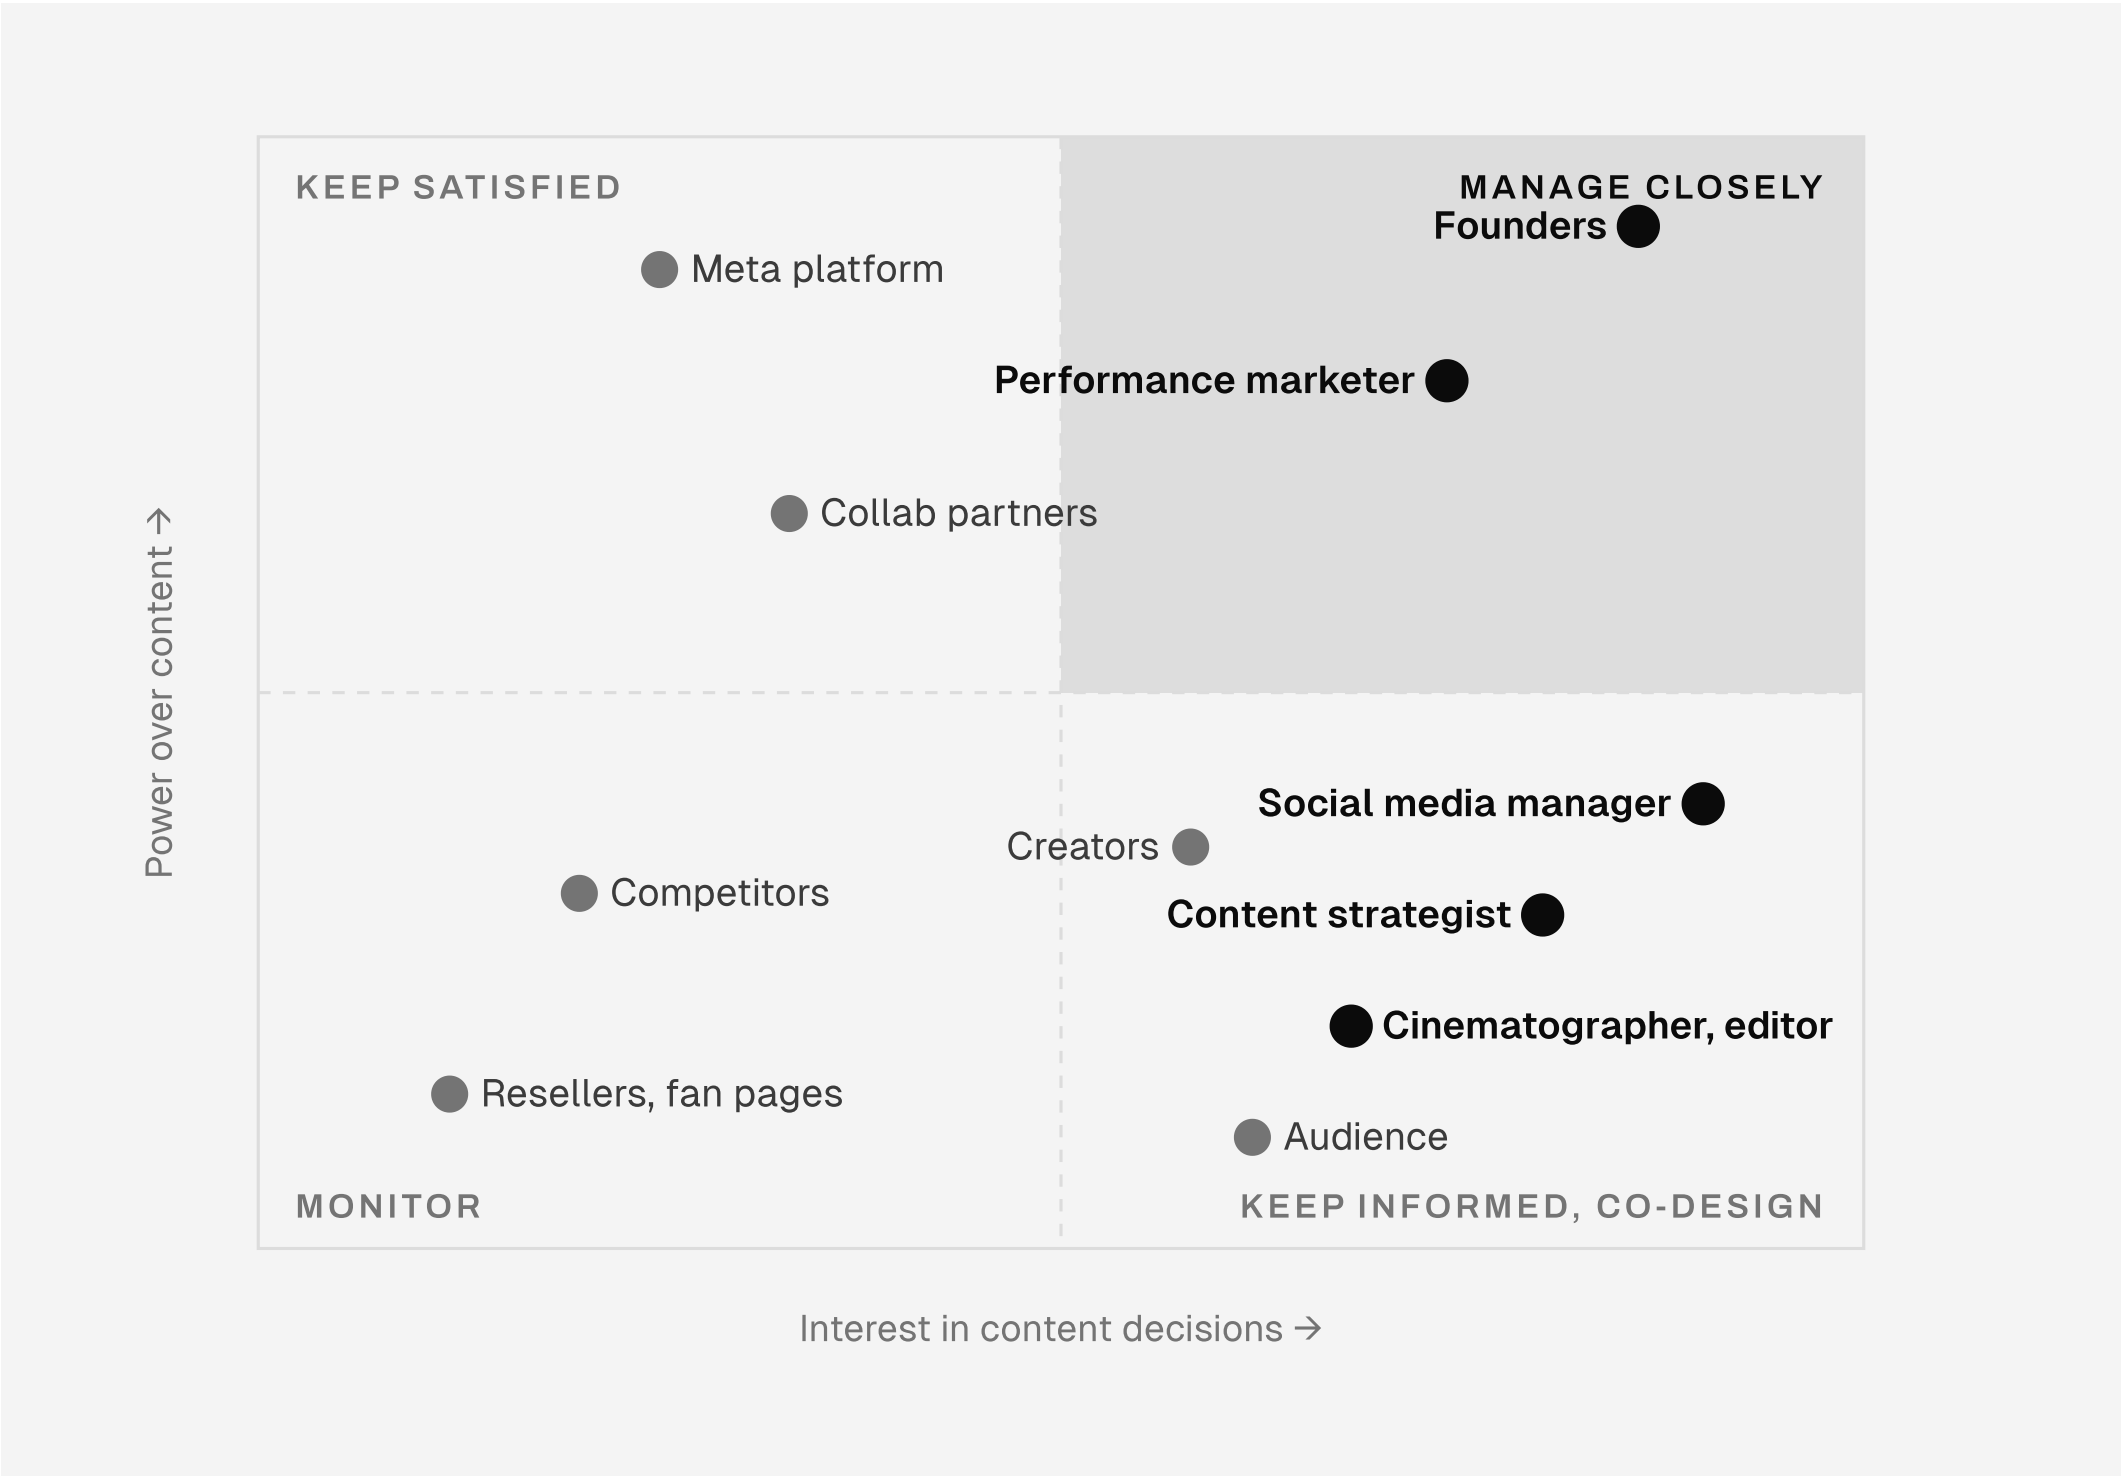

Who is involved, how content moves today, and exactly where it breaks.

- STAKEHOLDERS MAP
- SYSTEM MAPPING
- PROBLEM MAPPING
- TARGET USERS

5. STAKEHOLDERS MAP

5.1 ONION MAP (CORE → OUTER)

POWER AND INTEREST

BLUE DOTS ARE THE PRODUCT'S DAILY USERS

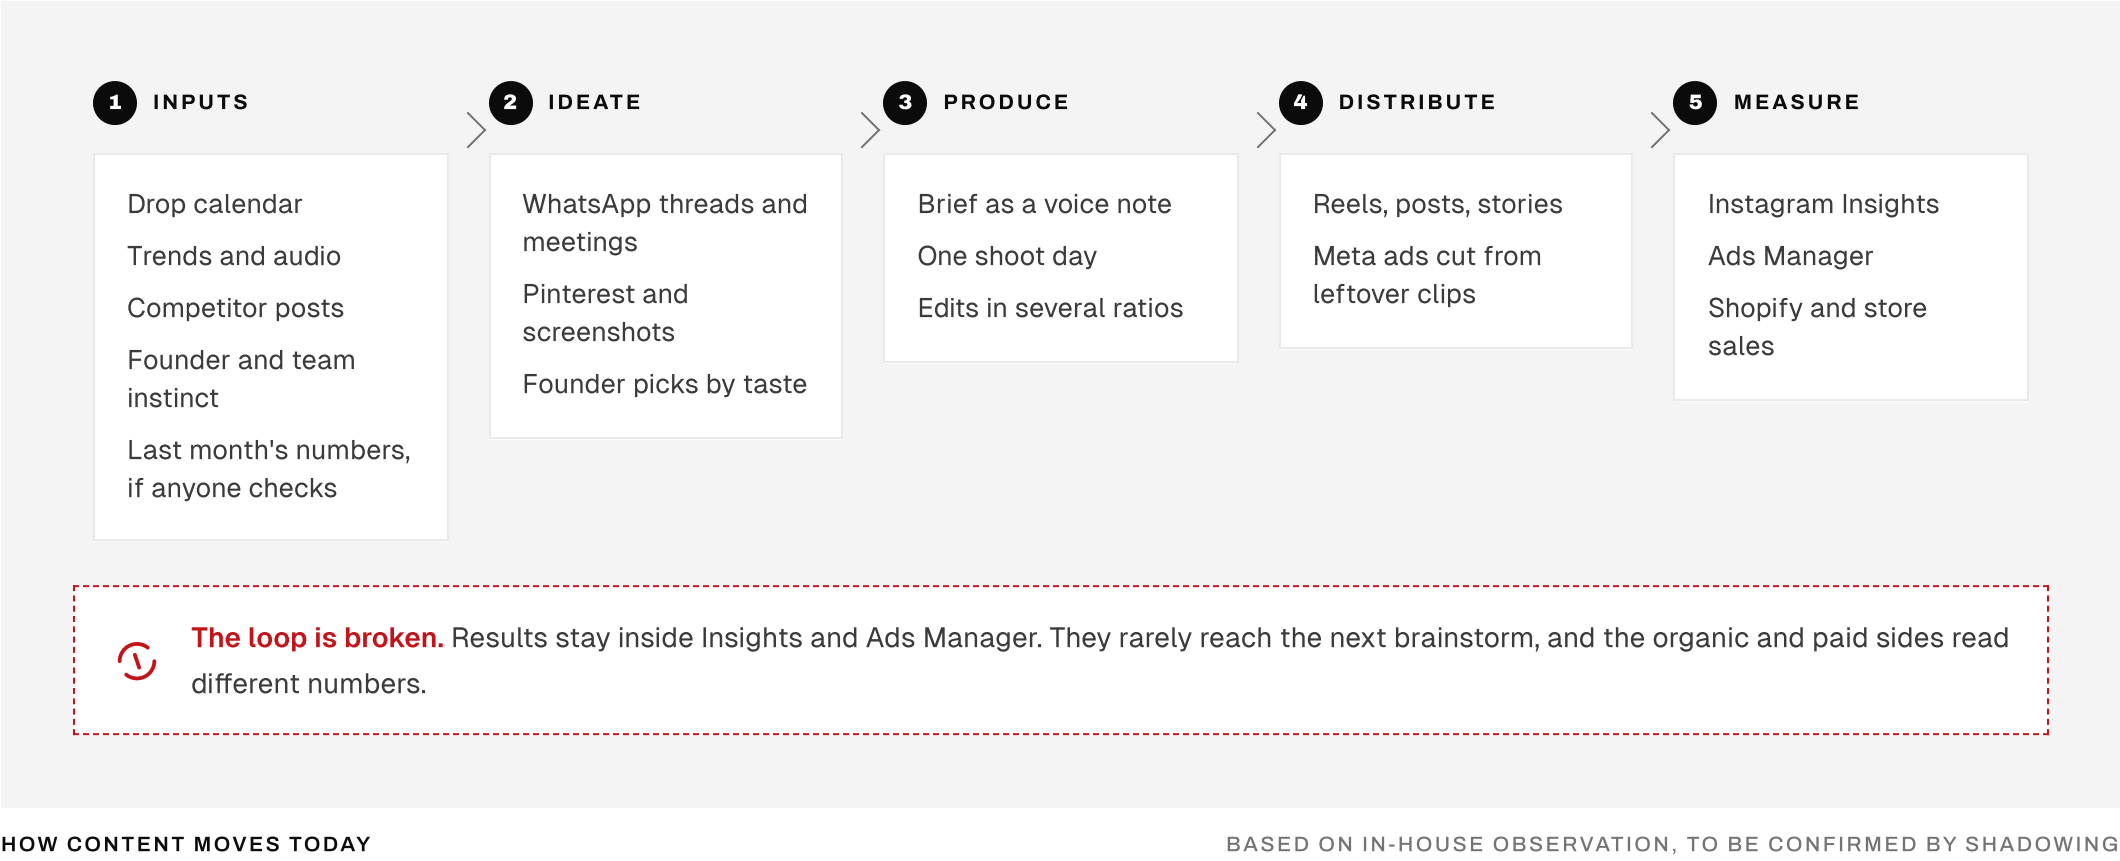

Strategy: manage the founders and the performance marketer closely by showing return and brand safety. Co-design with the content team. Keep Meta satisfied by staying inside its API and ad policies. Monitor competitors.

5.3 STAKEHOLDER NEEDS TABLE

STAKEHOLDER	NEEDS FROM CONTENT	PAIN TODAY	WHAT BLUPRINT GIVES THEM
Founders / Brand head	Brand stays premium; growth; recall	Can't see <i>why</i> things work; approvals over WhatsApp	Brand-guard score, clear rationale, one approval view
Social media manager	Consistent, fresh calendar	Idea block, trend chasing, manual reporting	Idea bank, IP series planner, auto insights
Content strategist / creative lead	Strong concepts, coherent narrative per drop	Briefs scattered; wins not repeated	Brief builder, "what worked" memory
Cinematographer / editor	Clear shot lists, references, deadlines	Vague briefs, last-minute changes, re-shoots	Shot list + hook + aspect ratios + references in one brief
Performance marketer	Many ad variations, fast; fatigue control	Waits on creative; doesn't know which angle to test next	Angle/hook matrix, fatigue alerts, "promote this organic winner"
Design/product team	Product story told well	Content not aligned with drop dates	Drop-calendar-linked content plan
Audience	Entertaining, cultural, not salesy	Repetitive ads, generic posts	Better, more varied content (indirect benefit)

6. UNDERSTANDING THE SYSTEM (SYSTEM MAPPING)

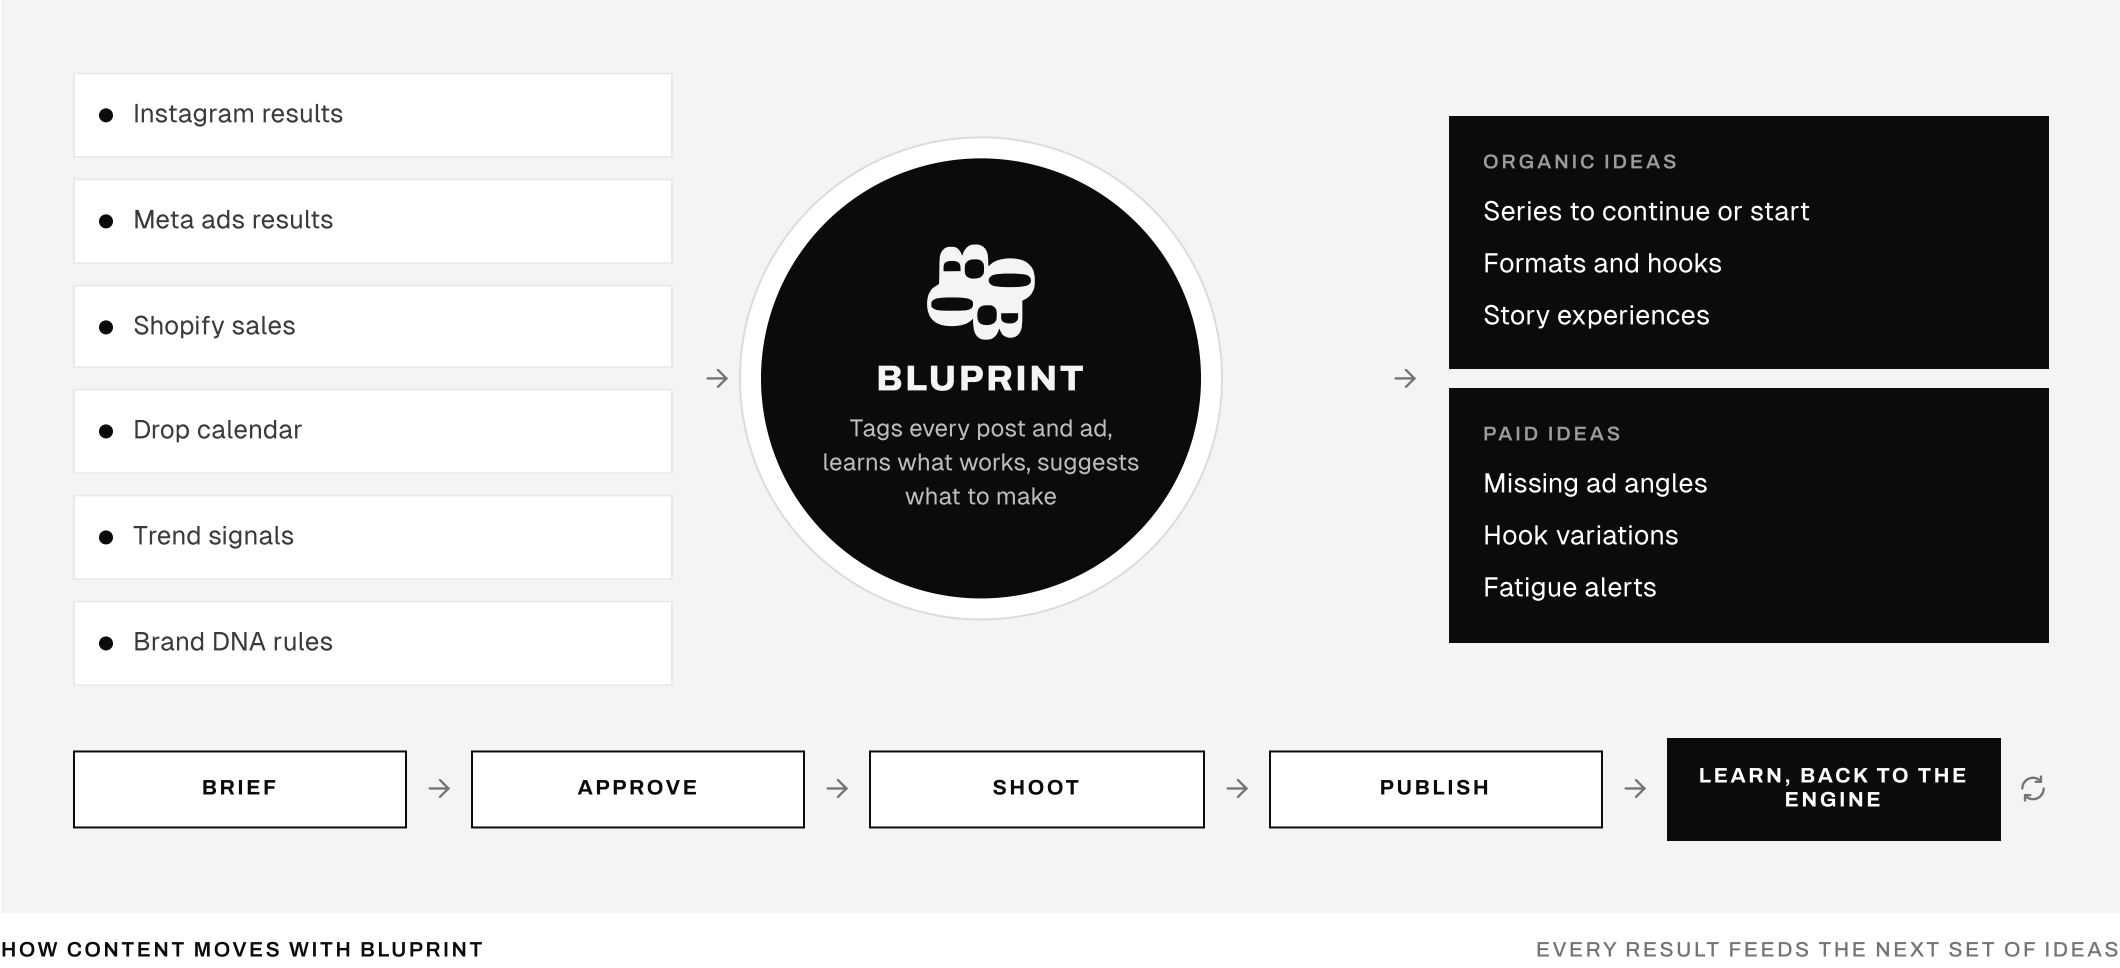

6.1 CURRENT-STATE CONTENT SYSTEM ("AS-IS")

Observations:

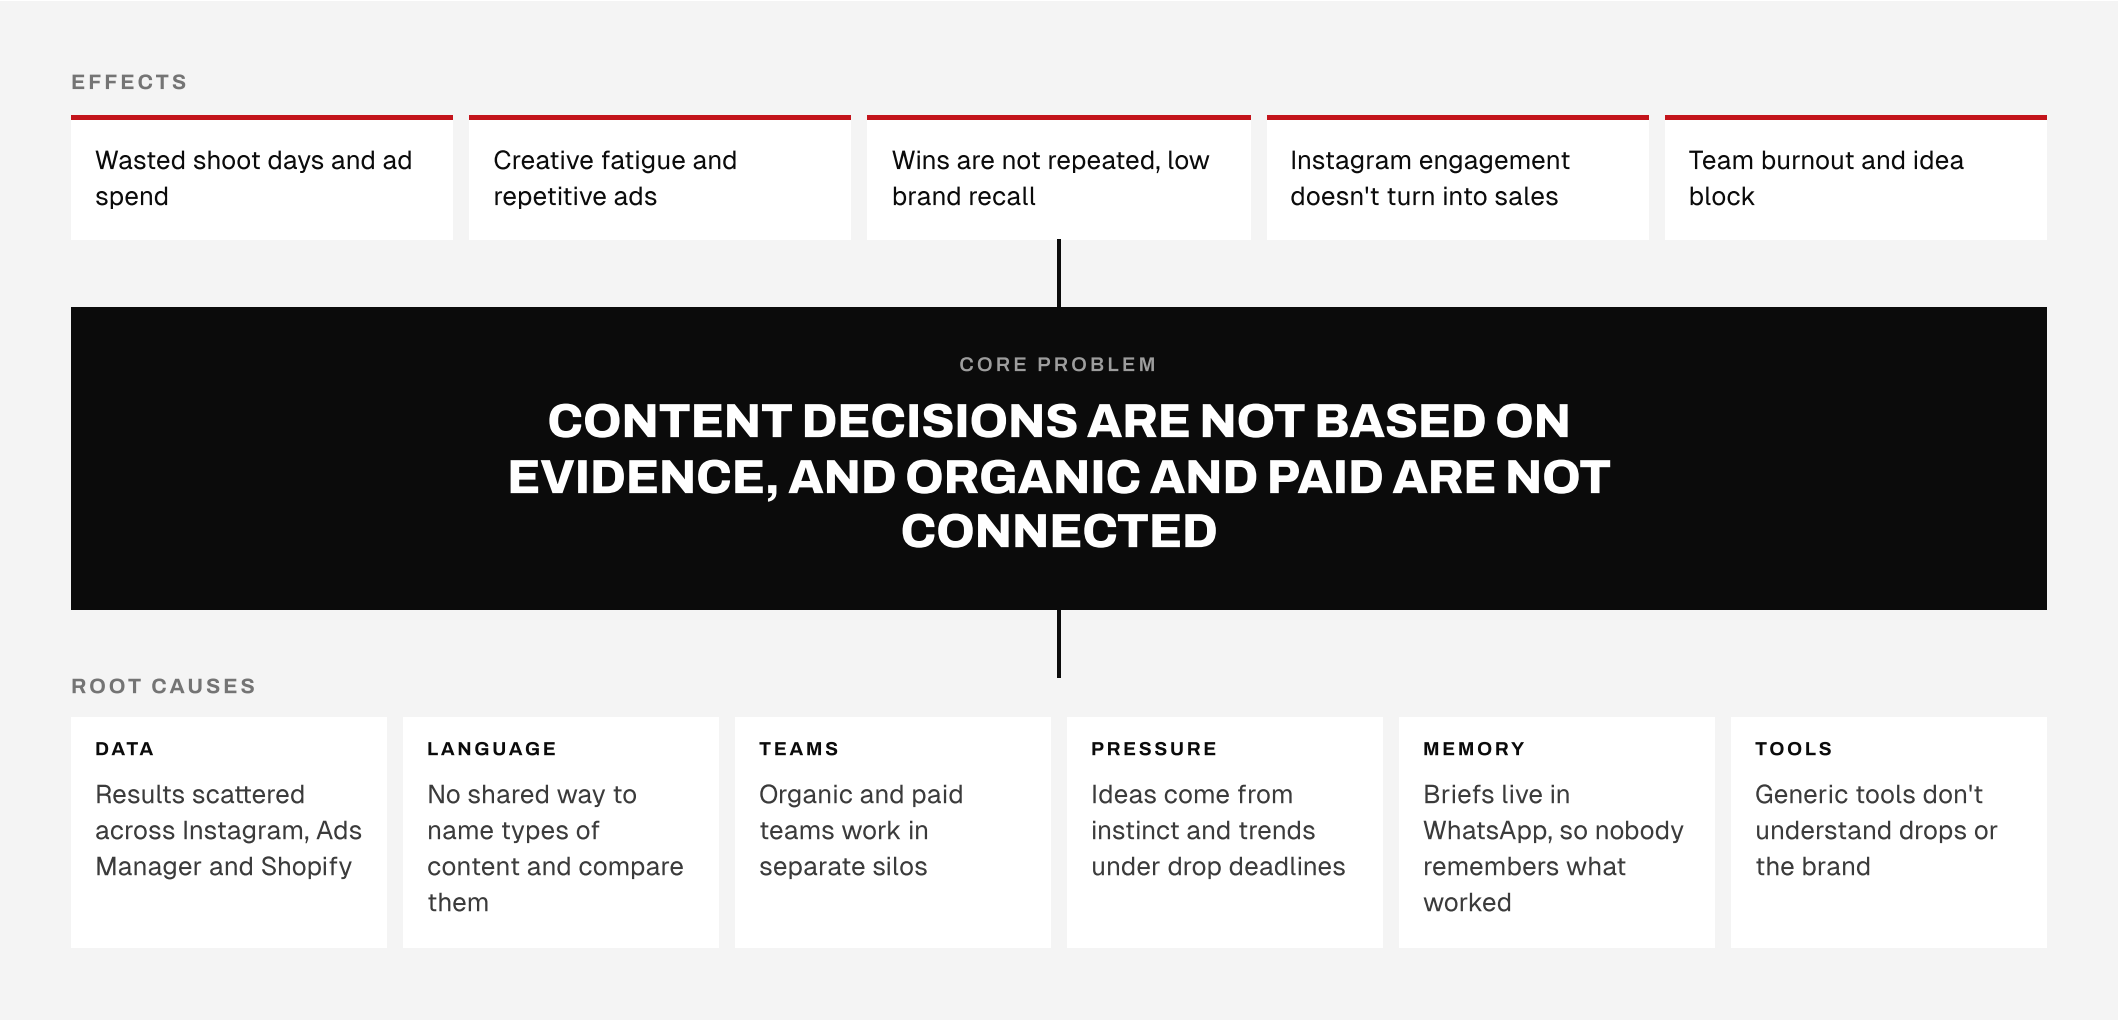

- Broken feedback loop:** measurement data rarely flows back into ideation in a structured way.
- Organic ↔ paid silo:** the organic team and the performance marketer use different tools and metrics, and organic winners are rarely promoted systematically.
- Single point of decision:** founder approval is the bottleneck, and the criteria are taste-based and undocumented.
- Memory loss:** what worked last drop lives in people's heads and chat history.
- Production is expensive:** every shoot day matters, so wrong ideas are costly.

6.2 FUTURE-STATE SYSTEM ("TO-BE" WITH BLUPRINT)

7. PROBLEM IDENTIFICATION & ANALYSIS (PROBLEMS MAPPING)

7.1 PROBLEM TREE

PROBLEM TREECAUSES AT THE ROOTS, EFFECTS IN THE BRANCHES

7.2 PROBLEM CLUSTERS (AFFINITY)

CLUSTER	PROBLEMS	SEVERITY (H/M/L)
A. Knowing what works	Can't link a post's <i>type</i> to its result. Vanity metrics. No benchmark vs own history	H
B. Ideation	Idea block. Trend-chasing feels off-brand. Same ideas repeated	H
C. Organic ↔ paid	Organic winners not promoted. Ads made separately. Different KPIs	H
D. Ad creative	Not enough variations. Fatigue noticed late. Unclear what to test next	H
E. Briefing & production	Vague briefs, re-shoots, missing aspect ratios, last-minute changes	M
F. Planning	Content not aligned to drop calendar. Last-minute rush before drops	M
G. Approvals	Founder bottleneck. Taste criteria undocumented	M
H. Brand consistency	Fear of looking "mass" or salesy. No brand guardrails	M

7.3 5 WHYS (EXAMPLE)

1. *Why did the last drop's ads underperform?* → The creatives looked very similar.
2. *Why?* → All were cut from the same lookbook shoot.
3. *Why?* → Only one shoot was planned, focused on the lookbook.
4. *Why?* → Nobody planned ad angles (UGC, detail, social proof) before the shoot.
5. *Why?* → **There's no step that converts "what wins" into a pre-shoot content plan for both organic and paid.** ← the design opportunity.

8. DEFINED PROBLEM AREA & TARGET USERS

8.1 PROBLEM AREA

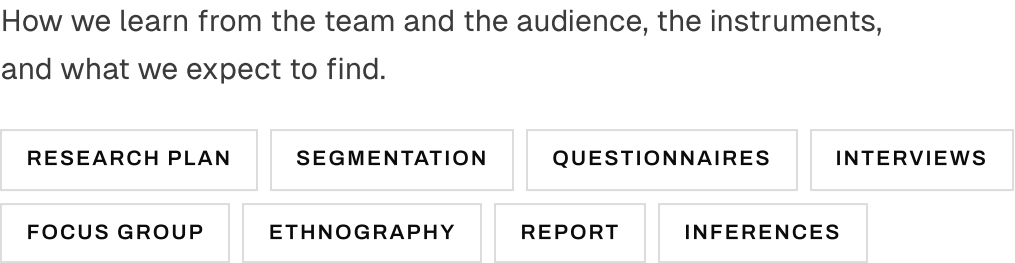

The ideation-to-brief stage of content creation, meaning the point where a streetwear brand's team decides *what to make* for Instagram and Meta ads. Today it is disconnected from performance data, brand rules and the drop calendar.

8.2 TARGET USERS

TIER	USERS	WHY
Primary	In-house content team (social media manager, content strategist/creative lead) and performance marketer	They decide what gets made and run, every week
Secondary	Cinematographer / photographer / editor, founders/brand head (approver)	They consume briefs and recommendations and approve
Tertiary	Agencies, freelancers, creators working with the brand	Receive briefs, need brand context
Indirect beneficiary	BLUORNG's audience	Gets better, more relevant content
Scale-up market	Other Indian premium D2C streetwear & fashion brands (5–50 person teams, Instagram-led, drop-based)	Shows the product's viability beyond one client

PRIMARY RESEARCH

8 STAGES

Read this first: This part gives you the research **plan, instruments, analysis method and report structure**, filled with **hypotheses** where the results will go. You must run the research yourself; the jury will check that the data is real. Every ☐ / ☐ cell is a slot for your real findings. Hypotheses (H1–H10) are what we *expect* to find. Your data will confirm or reject them, and a rejected hypothesis is a good finding too.

9. PRIMARY RESEARCH PLAN

9.1 RESEARCH QUESTIONS

#	RESEARCH QUESTION	METHOD(S)
RQ1	How does BLUORNG's team currently decide what content to make (organic & paid)?	Contextual inquiry, shadowing, interviews
RQ2	Which data do they look at, how often, and what do they do with it?	Interviews, survey (team/industry)
RQ3	Where are the biggest time, money and frustration losses in ideation → brief → shoot → post → measure?	Shadowing a drop week, journey mapping, survey
RQ4	How do organic and paid teams coordinate (or not)?	Interviews with both roles
RQ5	What content does BLUORNG's audience engage with, save, share, and buy from, and why?	Audience survey, focus group, content audit
RQ6	What would make the team trust (or reject) AI/data-based content recommendations?	Interviews, concept test

9.2 HYPOTHESES

ID	HYPOTHESIS
H1	Most content decisions are made on intuition/trends, not on structured data
H2	Teams check performance data, but fewer than half use it to plan the <i>next</i> content
H3	Organic winners are rarely turned into ads systematically
H4	Performance marketers feel they don't get enough ad creative variations
H5	Vague briefs cause re-shoots/re-edits at least occasionally
H6	Drop weeks create last-minute content pressure
H7	The audience engages more with behind-the-scenes, craft/detail (ASMR) and styling content than with plain product posts
H8	The audience dislikes ads that look like ads, and prefers creator/UGC-style ones
H9	Teams would trust AI suggestions only if they're explained and editable
H10	Brand consistency ("not looking mass") is a top concern for premium brands

9.3 METHODS & SAMPLE

METHOD	WHO	SAMPLE	DURATION	OUTPUT
Content audit (secondary/primary)	BLUORNG IG: last 90 posts + 30 ads (with permission) + 3 peer brands	90 + 30 posts	1 week	Tagged spreadsheet: format, IP, hook, emotion, goal → metrics

METHOD	WHO	SAMPLE	DURATION	OUTPUT
Survey A: Practitioners	Social media managers, content creators, cinematographers, performance marketers at fashion/D2C brands (incl. BLUORNG team)	20–40	10 min	Quant data on workflow & pain
Survey B: Audience	18–30 streetwear followers (BLUORNG followers via story link + college + streetwear communities)	100–150	5–7 min	What content people engage with and buy from
In-depth interviews	BLUORNG founder/brand head, social manager, perf. marketer, editor + 3–4 external practitioners	6–8	30–45 min	Qualitative insights, quotes
Focus group	6–8 audience members (BLUORNG buyers + followers)	1–2 groups	60 min	Reactions to content types & ads
Ethnography / shadowing	Shadow one full drop week (planning meeting → shoot → edit → posting → ad launch)	1 drop cycle	5–7 days	Observation log, photos, time-on-task, journey map
Concept probe (end of research)	4–5 team members	4–5	20 min	Reactions to 3 rough concept sketches

9.4 ETHICS

- Mentor approval for internal data. Consent at the start of every survey/interview. Anonymise names ("P1, P2..."). No personal audience data stored. Record only with permission.

10. USER STUDY: USER BASE & USER SEGMENTATION

10.1 USER BASE

Internal users (product users): people who **create or decide on content** at drop-led fashion brands.

10.2 SEGMENTATION

SEGMENT	ROLE EXAMPLES	MAIN GOAL	DATA COMFORT	KEY NEED FROM BLUPRINT
S1: The Strategist	Social media manager, content strategist	Consistent, growing, on-brand feed	Medium	Ideas + calendar + insights in plain language
S2: The Maker	Cinematographer, photographer, editor, designer	Shoot great content efficiently	Low–medium	Clear brief, shot list, references, ratios
S3: The Optimiser	Performance marketer, media buyer	ROAS / CPA, fresh creatives	High	Angle/hook matrix, variation planning, fatigue alerts
S4: The Approver	Founder, brand head	Brand integrity + growth	Low (wants summaries)	Quick review, rationale, brand-guard
S5: The Partner	Agency, freelancer, creator	Deliver what the brand wants	Varies	Brand DNA + brief

Audience segmentation (for content taxonomy, not product users):

SEGMENT	DESCRIPTION	CONTENT THEY LIKELY RESPOND TO
Hype Hunters	Follow drops, buy fast, resell-aware	Countdowns, scarcity, drop alerts
Culture Seekers	Love the aesthetic, music, art, community	Campaign films, collabs, culture posts, BTS
Style Learners	Want to dress well	Styling guides, fit checks
Quality Checkers	Premium buyers judging value	ASMR detail, fabric/craft, founder POV
Window Shoppers	Aspirational, low purchase frequency	Memes, reels, entertainment

11. RESEARCH INSTRUMENTS

11.1 SURVEY A: PRACTITIONERS (GOOGLE FORM)

Intro: "I'm a design student researching how fashion brands decide what content to create. 10 minutes, anonymous."

Section 1: About you

1. Your role? *(Social media manager / Content strategist / Cinematographer-photographer / Editor / Performance marketer / Founder / Agency / Other)*
2. Brand type? *(Streetwear / Premium fashion / Mass fashion / Other D2C)*
3. Team size? *(1–3 / 4–10 / 11–25 / 25+)*
4. Years of experience? *(<1 / 1–3 / 3–5 / 5+)*

Section 2: How you decide content

5. How do you mainly decide what content to make? *(multi-select: Gut/experience, Trends/audio, Competitors, Past performance data, Founder/manager decides, Agency suggests, Audience comments/DMs)*
6. How often do you look at content performance data? *(Daily / Weekly / Monthly / Rarely / Never)*
7. When you look at data, do you use it to plan the next content? *(Always / Often / Sometimes / Rarely / Never)*
8. Which tools do you use? *(IG Insights, Meta Ads Manager, Meta Business Suite, Later/Hootsuite/Sprout, Notion, Google Sheets, WhatsApp, ChatGPT, Motion/Foreplay, Other)*
9. Rate (1–5): "I know clearly which *type* of content works best for our brand."
10. Rate (1–5): "Coming up with fresh content ideas every week is hard."

Section 3: Organic ↔ paid

11. How often are your best organic posts turned into ads? *(Always ... Never)*
12. Rate (1–5): "Organic and paid teams plan content together."
13. *(Perf. marketers)* How many new ad creatives do you test per month? *(0–2 / 3–5 / 6–10 / 10+)*
14. *(Perf. marketers)* Rate (1–5): "I get enough creative variations to test."
15. How do you notice an ad is fatigued? *(open)*

Section 4: Brief & production

16. How are content briefs usually shared? *(Verbal, WhatsApp, Doc/Notion, Deck, No brief)*
17. How often do vague briefs cause re-shoots or re-edits? *(Very often ... Never)*
18. Rate (1–5): "Drop weeks are stressful for content."

Section 5: Pain & wishes

19. Rank your top 3 problems: *(Idea block, Not knowing what works, Too little time, Too few ad variations, Unclear briefs, Approval delays, Staying on-brand, Reporting takes time)*
20. Would you trust content suggestions from an AI tool? *(Yes / Only if it explains why / Only as inspiration / No)*
21. What must such a tool NEVER do? *(open)*
22. If you had a magic content assistant, what's the first thing it would do for you? *(open)*

11.2 SURVEY B: AUDIENCE

1. Age, 2. City, 3. Do you follow BLUORNG?, 4. Have you bought from BLUORNG? *(Yes / Planning to / No)*
2. Where do you **discover** new streetwear brands? *(IG Reels, IG Explore, Friends, Creators, Ads, Stores, Reddit/Discord, Other)*
3. Which content from fashion brands do you **watch fully**? *(multi: Drop teasers, Lookbooks, BTS/studio, ASMR/fabric close-ups, Styling guides, Fit checks/street style, Memes/culture, Collabs, Founder stories, Interactive stories)*
4. Which do you **save or share**? *(same list)*
5. Which content made you **buy** (or want to)? *(same list + open)*
6. Rate (1–5): "Brand ads on Instagram annoy me."
7. Which ads make you stop scrolling? *(Creator wearing it, Close-up details, Drop countdown, Store/queue hype, Model lookbook, Price/offer)*
8. How often should a streetwear brand post? *(Daily, 3–5/week, 1–2/week)*
9. Do you take part in polls/quizzes in brand stories? *(Often, Sometimes, Never)*
10. One thing you'd love BLUORNG to post more of? *(open)*
11. One thing you'd want them to stop? *(open)*

11.3 INTERVIEW GUIDE (TEAM / PRACTITIONERS): 30–45 MIN

1. **Warm-up:** Walk me through your role and a normal week.
2. **Last piece of content:** Tell me about the last Reel/ad you worked on. Where did the idea come from? Who decided? What happened after?
3. **Data:** What numbers do you check? Show me (screen-share). What do you do with them?
4. **Wins & losses:** Tell me about a post/ad that did really well. Why do you think it did? Did you make more like it? And one that flopped?
5. **Organic ↔ paid:** How does content move from Instagram to ads (or the reverse)?
6. **Briefs:** Show me a recent brief. What's usually missing?
7. **Drops:** Walk me through the last drop week, day by day.
8. **Brand:** How do you know something is "BLUORNG" or "not BLUORNG"?

9. **AI/tools:** Have you used ChatGPT or any tool for ideas? What was good or bad?

10. **Magic wand:** If one part of this process could be fixed, which?

Founder variant: Add "What makes you approve or reject a content idea?" and "How do you judge if content is working: sales, buzz, or feel?"

11.4 FOCUS GROUP GUIDE (AUDIENCE): 60 MIN

- 1. Ice-breaker: Your favourite streetwear brand on IG and why.
- 2. **Card sort:** Show 15 printed BLUORNG and peer-brand posts/ads → group them into "would watch / save / share / buy / skip".
- 3. Discuss: What makes a brand post feel premium vs cheap? Ad vs content?
- 4. Show 3 ad styles (studio lookbook vs creator UGC vs ASMR detail) and discuss reactions.
- 5. Co-create: "Design BLUORNG's next IG series."

11.5 ETHNOGRAPHY / SHADOWING LOG (TEMPLATE)

DAY	TIME	ACTIVITY	PEOPLE	TOOLS USED	TIME SPENT	PAIN / WORKAROUND OBSERVED	QUOTE
Mon		Drop planning meeting					
Tue		Shoot day					
...							

11.6 CONTENT AUDIT SHEET (TEMPLATE)

POST ID	DATE	FORMAT (REEL/CAROUSEL/STATIC/STORY/AD)	IP/SERIES	HOOK (FIRST 3 S)	EMOTION	GOAL	REACH

11.7 PILOT TEST (SAMPLE TEST OF THE QUESTIONNAIRE)

- Run both surveys with **3–5 people** before launch (e.g. 2 BLUORNG teammates + 2 peers + 1 audience member).
- Track: time to complete, confusing questions, missing options, drop-off.
- Record a change log:

Q#	PROBLEM FOUND IN PILOT	CHANGE MADE
e.g. Q5	"Trends" was unclear (audio vs fashion trends)	Split into "Trending audio/memes" and "Fashion trends"

12. PRIMARY RESEARCH REPORT

12.1 PARTICIPANTS (FILL IN)

METHOD	PLANNED	ACHIEVED	NOTES
Survey A (practitioners)	20–40	☐	
Survey B (audience)	100–150	☐	
Interviews	6–8	☐	
Focus group	1–2	☐	
Shadowing	1 drop week	☐	
Content audit	90 posts + 30 ads	☐	

12.2 DATA REPRESENTATION: CHARTS TO PRODUCE

Make these charts from your Google Forms export (Forms → Responses → Sheets, or use [research/chart-builder.html](#) in this repo: paste your CSV and it draws the bar charts):

CHART	TYPE	QUESTION(S)	TESTS
How content is decided	Horizontal bar (multi-select %)	A-Q5	H1

CHART	TYPE	QUESTION(S)	TESTS
Data use vs data check	Grouped bar	A-Q6 vs A-Q7	H2
Organic → ads conversion	Stacked bar	A-Q11	H3
Enough variations?	Likert diverging bar	A-Q14	H4
Top problems	Ranked bar (weighted 3-2-1)	A-Q19	priority
AI trust	Pie/donut	A-Q20	H9
Content watched vs saved vs bought	Grouped bar per content type	B-Q6/7/8	H7
Ad styles that stop the scroll	Horizontal bar	B-Q10	H8
Content audit: median saves/reach by IP	Bar per IP	Audit	H7
Content audit: ad CPA by angle (indexed)	Bar per angle	Audit	H8

12.3 FINDINGS TABLE (FILL IN WITH YOUR REAL NUMBERS)

HYPOTHESIS	EVIDENCE (NUMBERS + QUOTE)	RESULT
H1 Intuition-led	☐ % chose gut/trends vs ☐ % past data. Quote: "..."	Yes / No / partial
H2 Data not used to plan	☐ % check weekly, ☐ % use it to plan	
H3 Organic→ads rare	☐ % "rarely/never"	
H4 Too few variations	avg ☐ /5	
H5 Brief re-shoots	☐ % "often/sometimes"	
H6 Drop-week stress	avg ☐ /5	
H7 BTS/ASMR/styling > product	audit: ☐ × saves vs product posts	
H8 UGC > polished ads	☐ % picked creator ads	
H9 Explainable AI	☐ % "only if it explains why"	
H10 Brand consistency	☐ mentions in interviews	

12.4 QUALITATIVE ANALYSIS METHOD

1. Transcribe interviews → pull **quotes on sticky notes** (Miro/FigJam).
2. **Affinity map** into themes (use the clusters A–H in Part 3 as a starting frame and add new ones).
3. Count frequency (how many participants mention each theme) → **priority**.
4. Turn each theme into an **insight statement**: *"[User] needs [need] because [insight]."*

12.5 EXPECTED INSIGHT STATEMENTS (VALIDATE OR REWRITE WITH YOUR DATA)

1. **"Data without direction."** The team sees numbers, but nobody turns them into "make more of X, less of Y".
2. **"The idea treadmill."** A drop-led brand needs constant novelty, and idea block peaks right before drops.
3. **"Two teams, one feed."** Organic and paid share the same audience but not the same plan.
4. **"Same shoot, same ads."** Ad variations are limited by what was shot, so planning ad angles *before* the shoot is the real fix.
5. **"Brief is a WhatsApp voice note."** Makers lose time to unclear briefs and re-edits.
6. **"Protect the cool."** Any suggestion that feels mass, salesy or trend-chasing will be rejected.
7. **"Show me why."** Trust in AI depends on explanation, examples from the brand's own past, and the ability to edit.

12.6 PRIORITY AREAS OF CONCERN (SHORTLIST)

RANK	AREA	WHY IT'S PRIORITY	DESIGN RESPONSE
1	Knowing what works (by <i>type</i> of content)	Root cause for everything else	Auto-tagging + "Why it worked" insights
2	Ideation for organic IPs	Highest-frequency pain	IP/series recommender + idea bank
3	Ad creative diversity & fatigue	Direct money impact	Angle × hook matrix, fatigue alerts
4	Organic → paid bridge	Quick win	"Promote this winner" + shared calendar

RANK	AREA	WHY IT'S PRIORITY	DESIGN RESPONSE
5	Briefs	Saves maker time	One-click brief with shot list
6	Brand guardrails	Adoption condition	Brand DNA + brand-fit score

13. RESEARCH ANALYSIS & INFERENCES

13.1 IMMERSION INTO THE RESEARCH

- **Insider access as a strength:** I work inside BLUORNG's content team, so I can shadow real planning meetings, shoots and ad launches. My inside role is also a **bias risk**. I control for it with external practitioner interviews, the audience survey, and by separating *observation* from *interpretation* in my shadowing log.
- **Data access:** with mentor approval, export IG Insights and Meta Ads data (indexed) for the content audit.

13.2 DEFINING (REDEFINING) THE PROBLEM

Original brief: "A platform to help BLUORNG know what content to make for organic & Meta ads."

Redefined brief (after research, update with your evidence):

Design **BLUPRINT**, a decision and ideation tool for small, drop-led fashion content teams. It **(1)** learns which *types* of content work for the brand from its own organic and paid data, **(2)** turns that into on-brand recommendations for Instagram series/IPs and Meta ad angles, and **(3)** converts chosen ideas into shootable briefs planned around the drop calendar, so one shoot can feed both organic and paid.

What changed: the focus moved from "suggest content" to "**connect insight → idea → brief → shoot**", and **brand guardrails** and **explainability** were added as must-haves.

13.3 ELABORATED SCOPE OF DESIGN

End goal: a tested hi-fi prototype of BLUPRINT (web dashboard + mobile companion) and a design system.

Modules in scope:

1. **Pulse (Insights):** what worked and why, by content type.
2. **Ideas (Recommendations):** organic IPs & formats, paid angles & hooks.
3. **Briefs:** auto-generated shot lists, references, ratios, captions.
4. **Plan (Drop calendar):** organic + paid on one timeline.
5. **Brand DNA:** guardrails, tone, do's & don'ts.

User segments who benefit and can afford it: BLUORNG's in-house team (sponsor), then other Indian premium D2C fashion brands with 5–50 person teams that spend on Meta ads. They already pay for tools like Later or Motion, so a focused SaaS tier is realistic.

How we proceed: research findings → personas → problem statement → design goals → ideation → 3 concepts → final concept → IA → wireframes → UI → prototype → testing.

13.4 ENVIRONMENT & CONTEXT

DIMENSION	CONTEXT
Where	BLUORNG office/studio (planning on laptop), shoot locations and stores (mobile, on the go), founder reviewing on phone
When	Weekly content planning, monthly reviews, drop weeks (high pressure, high volume), ad refresh cycles (every 2–4 weeks)
Devices	Desktop/laptop for planning & analysis; mobile for briefs on set, approvals, quick idea capture
Data environment	Instagram Graph API, Meta Marketing API, Shopify; trend inputs (audio, culture)
Constraints	Meta API limits & policies; data privacy; small team (time-poor); premium brand (no discount-led content); production budgets; Indian network conditions on set
Beneficiaries (max benefit)	Content team (time, clarity), performance marketer (better CPA via diversity), founders (brand control, ROI), makers (clear briefs), audience (better content)

13.5 FACTORS & CONSTRAINTS → FINE-TUNED BRIEF

FACTOR	CONSTRAINT	DESIGN IMPLICATION
Technology	AI needs enough tagged data; cold start	Manual tagging + templates at start; learning improves over time
Business	Must show ROI quickly	"Quick wins" view (promote organic winners)
Brand	Premium, "cool", never desperate	Brand-fit score; no discount-style suggestions by default
People	Creative team resists "algorithm telling us what to do"	AI as co-pilot: suggest, explain, let humans decide
Time	Drop weeks are chaotic	Mobile, fast, glanceable
Ethics	Creator/model rights, data privacy	Usage-rights field in briefs; no audience PII

Sectors needing immediate attention before ideation: (1) a shared **content taxonomy**, (2) the **insight → idea** link, (3) the **organic ↔ paid** bridge.

PEOPLE AND PROBLEM

5 STAGES

Who we design for, how their week feels today, and the problem in one sentence.

- PERSONAS
- EMPATHY MAPS
- JOURNEY MAP
- PROBLEM STATEMENT
- DESIGN GOALS

These are **proto-personas** built from secondary research and in-house observation. After your interviews and surveys, update the quotes, numbers and frustrations with real data so they become **data-backed personas**.

14. PERSONAS

RM

RIA MALHOTRA, 26

Social media manager. 4 years, 2 at an agency.

PRIMARY

"I don't need more data. I need someone to tell me what the data means for next week."

GOALS

- Keep the feed fresh and on-brand
- Grow reach and saves
- Make every drop feel like an event

FRUSTRATIONS

- Can't tell why a Reel worked
- Idea block right before drops
- Builds reports by hand
- Founder feedback arrives late

IG INSIGHTS

NOTION

WHATSAPP

PINTEREST

CAPCUT

DATA COMFORT

AM

ARJUN MEHTA, 29

Performance marketer, Meta ads. 6 years across D2C brands.

PRIMARY

"Creative is my targeting now, and I'm always out of creative."

GOALS

- Hit return targets on drops
- Keep cost per sale stable
- Test 10+ creatives a month

FRUSTRATIONS

- Three edits from one shoot, all alike
- Notices fatigue too late
- Has to chase creator content

ADS MANAGER

SHEETS

SHOPIFY

ADS LIBRARY

DATA COMFORT

KS

KABIR SINGH, 24

Cinematographer and editor.

SECONDARY

"Tell me the story and the hook before I pick up the camera, not after the edit."

GOALS

- Shoot beautiful, purposeful content
- Avoid re-shoots
- Grow his craft

FRUSTRATIONS

- Briefs arrive as voice notes
- Finds out about 9:16 and 4:5 after the shoot
- Last-minute add-ons

CAMERA

PREMIERE

DAVINCI

DRIVE

DATA COMFORT

SK

SIDDHARTH K., 30

Co-founder and brand head. Approves content.

APPROVER

"If it looks like every other brand, it's not us. I don't care how many views it gets."

GOALS

- Protect the premium, cultural image
- Grow sales and recall

FRUSTRATIONS

- Too many approval pings
- Can't see the bigger picture
- Fears the brand looking mass-market

WHATSAPP

INSTAGRAM

DATA COMFORT

15. EMPATHY MAPS

RM

RIA

The strategist

SAYS

"What's trending this week?" "That Reel did 3x reach, let's do more like that?"

DOES

Scrolls competitors, saves audio, keeps ideas in Notes, pastes Insights screenshots into decks.

THINKS

"Am I just guessing?" "Will the founders like this?"

FEELS

Pressure before drops, creative burnout, proud when a post takes off.

PAINS

No link between data and ideas. Manual reports.

GAINS

Confidence. Repeatable wins. Time to be creative.

AM

ARJUN

The optimiser

SAYS

"Need 5 new hooks by Thursday." "Frequency is 4.2, we're burning out."

DOES

Duplicates ad sets, swaps headlines, logs tests in Sheets.

THINKS

"The organic team had a great Reel and nobody told me."

FEELS

Stuck waiting on creative. Stressed on launch days.

PAINS

Few variations. Late fatigue alerts. Silos.

GAINS

Steady cost per sale. A planned test pipeline.

KS

KABIR

The maker

SAYS

"What's the ratio?" "Can I get references?"

DOES

Shoots extra coverage just in case, then re-edits.

THINKS

"This shot would make a great ASMR ad, but nobody asked."

FEELS

Undervalued when plans change. Energised by a clear brief.

PAINS

Vague briefs. Re-shoots.

GAINS

A clear shot list. Creative ownership.

16. USER JOURNEY MAP: "PLANNING CONTENT FOR A NEW DROP" (RIA + ARJUN, AS-IS)

Ria and Arjun planning content for a new drop, as it works today.

Auto insights feed next ideas

CURRENT JOURNEY

LOW POINTS IN ORANGE ARE WHERE BLUPRINT STEPS IN

17. PROBLEM STATEMENT

How-Might-We / POV format:

Ria, a social media manager at a premium drop-led streetwear brand, needs a way to know what type of content to make next for Instagram and Meta ads, because today performance data, ideas, briefs and the drop calendar live in separate places, so content decisions are guesswork, wins aren't repeated, and ads run out of fresh creative.

Final problem statement:

Content teams at drop-led fashion brands like BLUORNG lack a connected, brand-aware system that turns their own organic and paid performance data into clear, explainable ideas and shootable briefs. This leads to guess-based content, repetitive ads, wasted production and spend, and weak learning between drops.

How Might We...

- 1. HMW help the team understand *why* a piece of content worked, by type, not just by number?
- 2. HMW turn insights into fresh, on-brand ideas for Instagram series/IPs?
- 3. HMW help performance marketers plan diverse ad angles *before* the shoot?
- 4. HMW make one shoot feed both organic and paid?
- 5. HMW make briefs so clear that makers never need a re-shoot?
- 6. HMW keep AI suggestions on-brand and trustworthy?

18. DEFINED DESIGN GOALS

#	DESIGN GOAL	SUCCESS METRIC (TO TEST IN USABILITY STUDY)
G1	Make performance meaningful: show what worked by content type, in plain language	User can name the top-performing IP & why in < 1 min
G2	Recommend, don't dictate: explainable, editable idea suggestions	≥ 80% of testers understand <i>why</i> an idea was suggested
G3	Bridge organic & paid: one plan, one shoot, both outputs	Ad variations planned per shoot ↑ (e.g. 3 → 10)
G4	Brief in one click: shot list, hook, ratios, references	Brief created in < 5 min; makers rate clarity ≥ 4/5
G5	Protect the brand: guardrails and brand-fit scoring	Founder approves ≥ 70% of suggestions without major edits
G6	Plan around drops: calendar-first view	Drop plan visible 2+ weeks ahead
G7	Learn continuously: feedback loop from results to ideas	Insight → idea links visible in the UI
G8	Fit the context: desktop for planning, mobile for set and approvals	Key tasks doable on mobile
G9	Accessible & inclusive: WCAG 2.2 AA	Contrast & touch targets pass checks

IDEAS TO DIRECTION

8 STAGES

From forty-plus raw ideas to three concepts, then one direction with a reason.

BRAINSTORMING

BRAINWRITING

SCAMPER

SPACE SATURATION

BULLSEYE

PRIORITY MATRIX

3 CONCEPTS

FINAL SELECTION

19. IDEATION TECHNIQUES

19.1 BRAINSTORMING (HMW-DRIVEN, 40+ RAW IDEAS)

HMW	IDEAS
HMW1 understand <i>why</i> content worked	Auto-tag every post by format/IP/hook/emotion, "Why it worked" cards, Compare to own median, Hook heatmap (retention curve), Weekly AI digest on WhatsApp, Leaderboard of IPs, "Content DNA" fingerprint per post
HMW2 fresh on-brand organic ideas	IP/series recommender, Idea bank with tags, Trend radar filtered by brand-fit, "Remix a winner" button, Audience question-mining from comments/DMs, Collab idea generator, Seasonal/culture calendar (festivals, music drops, cricket, fashion weeks), Story Experience builder (polls, quizzes)
HMW3 diverse ad angles	Angle × hook matrix, "Missing angles" alert, Fatigue predictor, Variation generator (same footage, new hooks/captions), Competitor ad swipe file, Creator/UGC brief generator
HMW4 one shoot → both outputs	Shoot planner that merges organic + ad shots, "Ad-ready" checklist per shot (ratios, hook frames, safe zones), Promote-winner pipeline
HMW5 clear briefs	One-click brief, Shot list with reference frames, Mobile "set mode" with checkboxes, Voice-note-to-brief converter, Moodboard auto-pull
HMW6 on-brand & trustworthy	Brand DNA setup, Brand-fit score, "Never suggest" list, Explain-why panel, Thumbs up/down learning, Founder approval queue

19.2 BRAINWRITING (6-3-5)

6 participants (BLUORNG team + design peers) × 3 ideas × 5 rounds of building on each other's ideas.
Example chain:

ROUND 1	ROUND 2 (BUILDS ON)	ROUND 3 (BUILDS ON)
"Show which Reels worked"	"...tag them by IP so we compare series, not posts"	"...and suggest the next episode of the winning series"
"Ad fatigue warning"	"...with a suggested replacement from organic winners"	"...auto-create a brief to shoot new hooks for it"
"Better briefs"	"...brief generated from the chosen idea"	"...with a mobile on-set checklist and ratios"

19.3 SCAMPER (APPLIED TO THE CURRENT WORKFLOW AND EXISTING TOOLS)

LETTER	PROMPT	IDEA
Substitute	Replace WhatsApp briefs with...?	Structured mobile brief cards
Combine	Combine IG Insights + Ads Manager + calendar?	One "Pulse" board for organic + paid
Adapt	Adapt Spotify's "Discover Weekly"?	" Ideas Weekly ": personalised idea drop every Monday
Modify / Magnify	Magnify the hook (first 3 s)?	Hook library + hook-level performance
Put to other use	Use organic Reels for ads?	"Promote winner" → ad variation plan
Eliminate	Eliminate manual reporting?	Auto weekly digest
Reverse / Rearrange	Plan ads <i>before</i> the shoot instead of after	Shoot planner that starts from ad angles

19.4 SPACE SATURATION & GROUP (AFFINITY OF ALL IDEAS)

All ideas on sticky notes → grouped into themes:

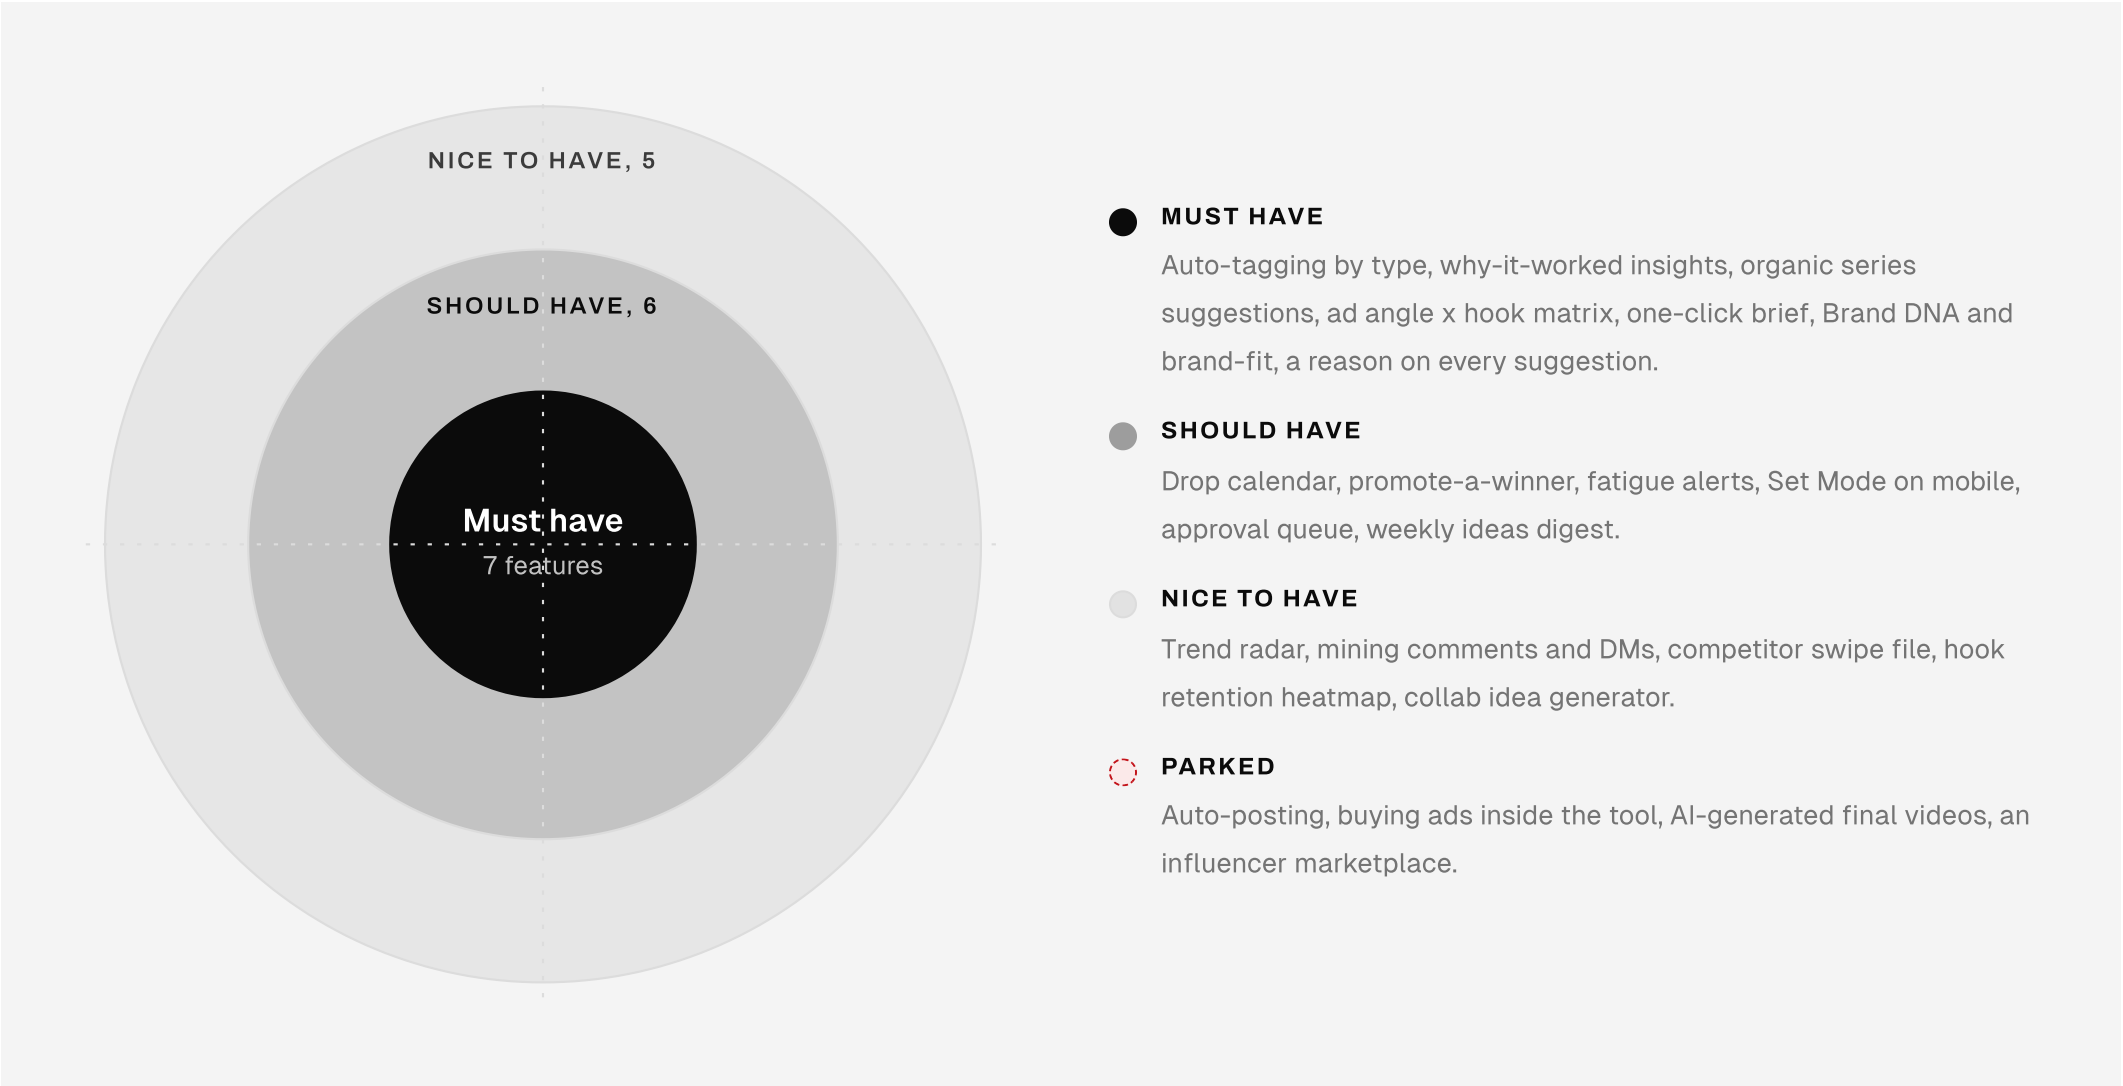

THEME CLUSTER	IDEAS GROUPED
Insight	Auto-tagging, why-it-worked, IP leaderboard, hook heatmap, digest
Ideate	IP recommender, trend radar, remix a winner, Ideas Weekly, comment mining, collab generator
Paid creative	Angle × hook matrix, missing angles, fatigue predictor, variation generator, UGC brief
Brief & produce	One-click brief, shot list, set mode, voice-to-brief, moodboard
Plan	Drop calendar, culture calendar, shared organic + paid timeline
Brand & trust	Brand DNA, brand-fit score, explain-why, feedback loop, approvals

19.5 CRAZY 8S (RAPID SKETCHES)

8 sketches in 8 minutes for the home screen: (1) feed of idea cards, (2) calendar-first, (3) dashboard-first, (4) chat co-pilot, (5) Tinder-style swipe on ideas, (6) kanban idea → brief → shot → live, (7) "Drop Room" per drop, (8) mobile set mode. *Add your hand sketches here.*

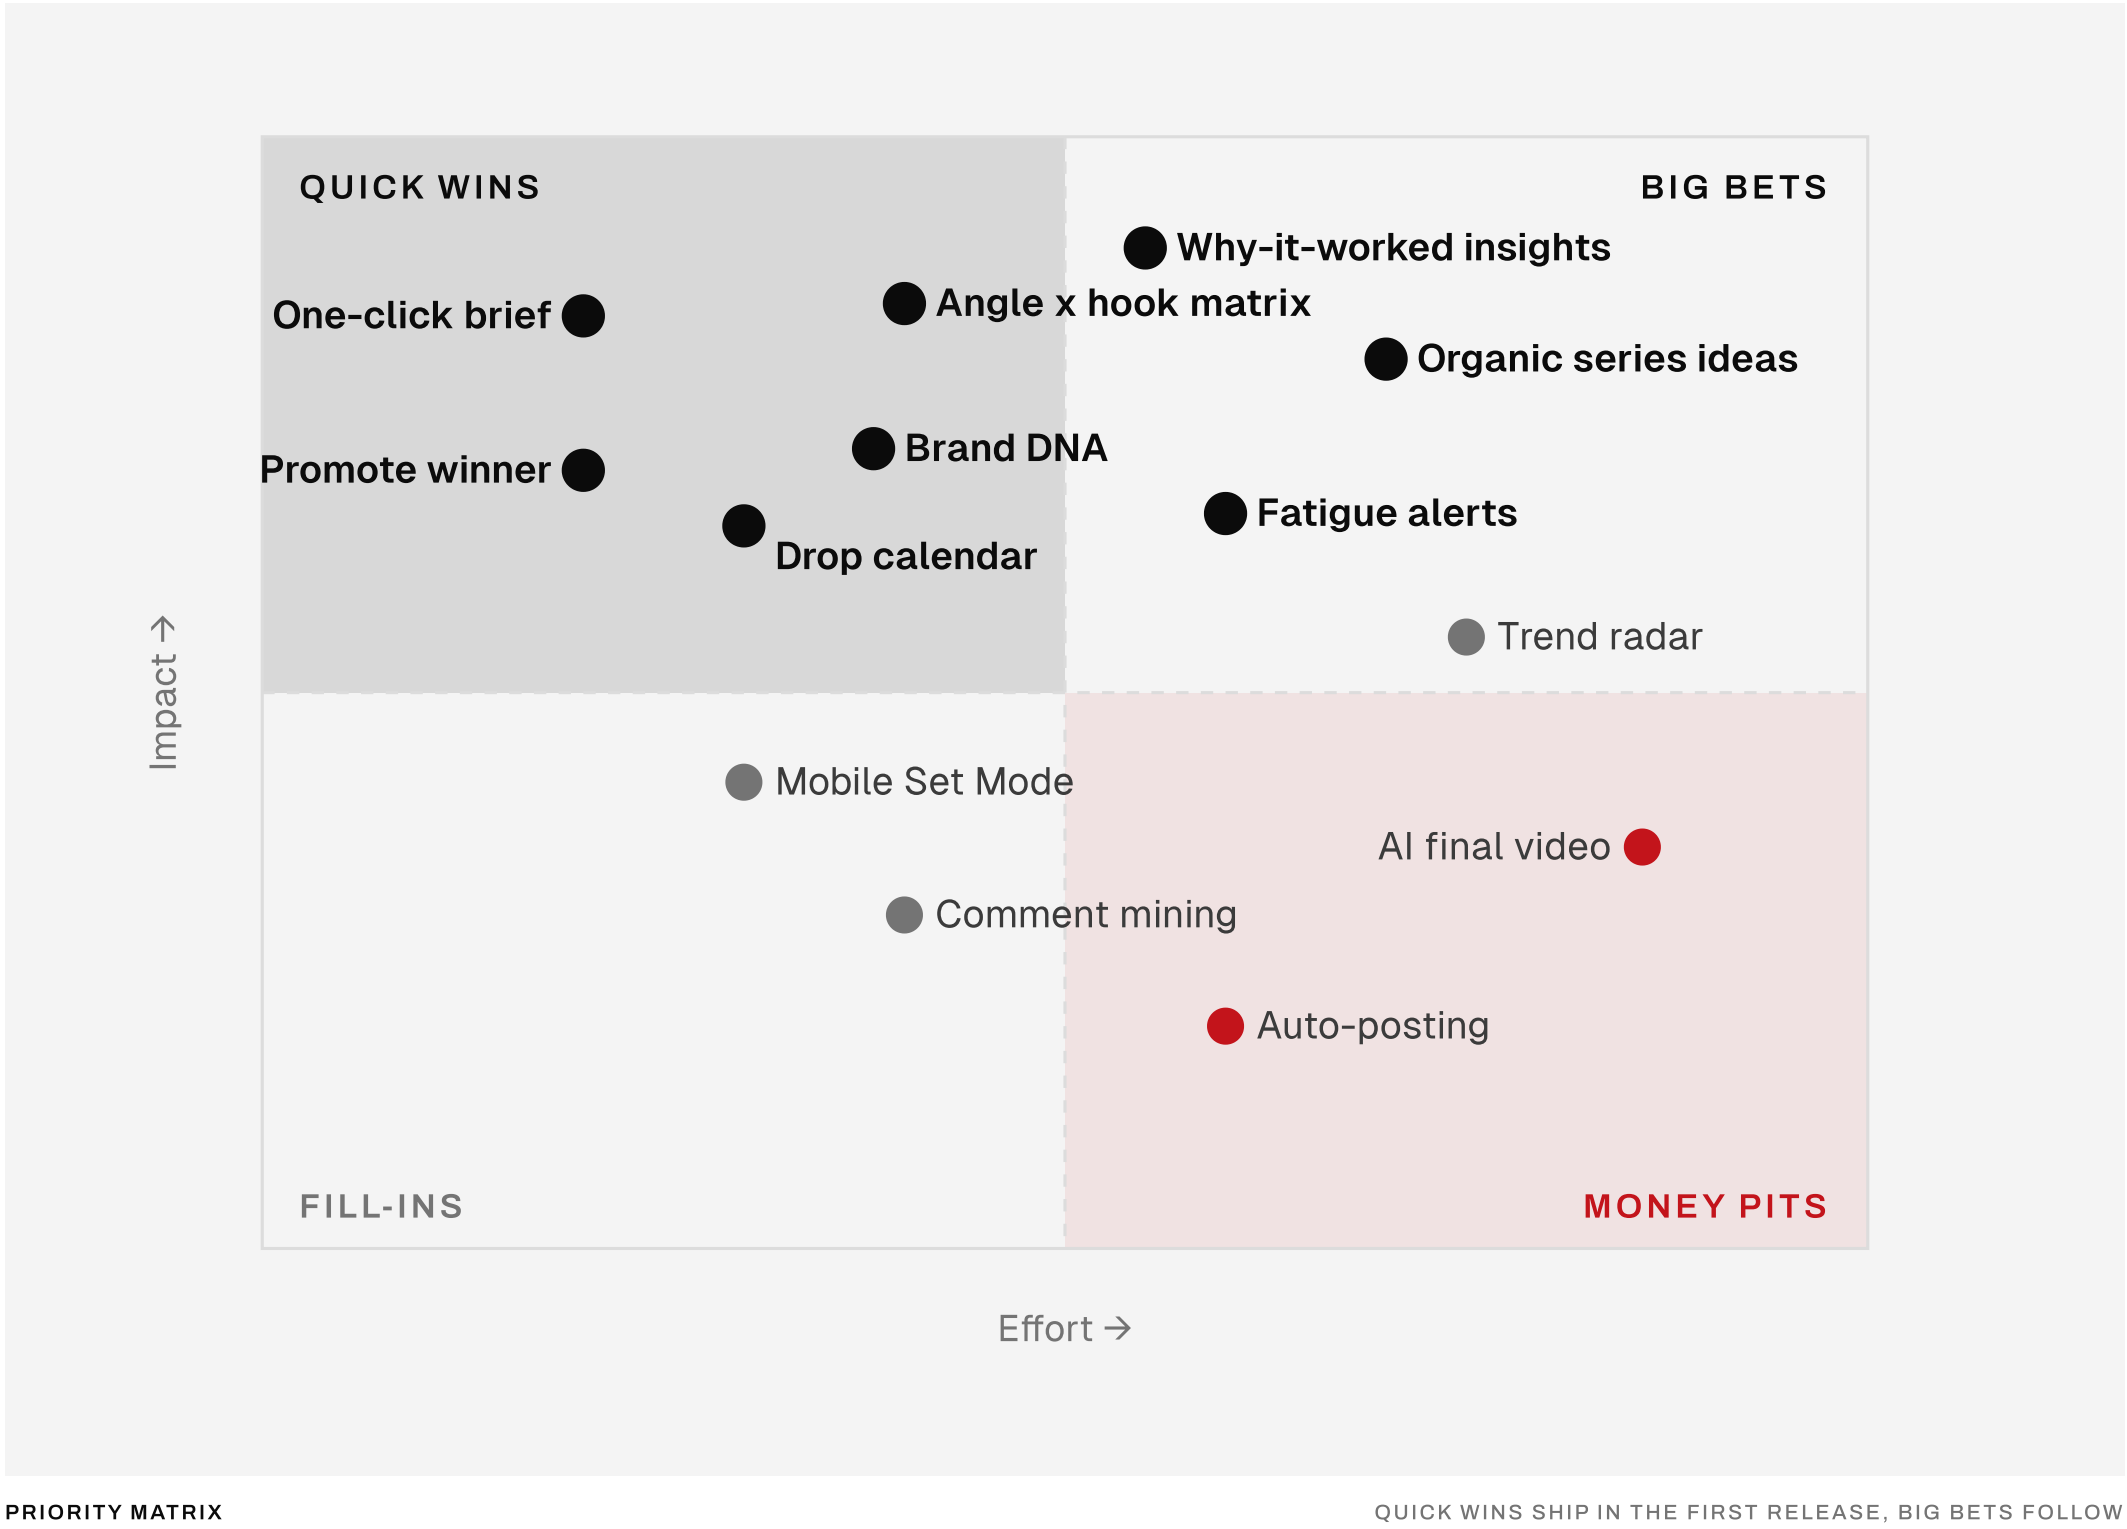

20. IDEATION FILTRATION

20.1 BULLSEYE DIAGRAM

BULLSEYE FILTRATION

INNER RING SHIPS FIRST

PRIORITY MATRIX

QUICK WINS SHIP IN THE FIRST RELEASE, BIG BETS FOLLOW

21. THREE CONCEPTS

Three directions, each sketched as a home screen and scored against the research needs and feasibility.

CONCEPT A

PULSE

An insight-first dashboard that pulls Instagram, Meta and Shopify data and ranks recommendations.

- + Strong data base, great for the marketer and founders
- + APIs already exist
- Doesn't help write ideas or briefs
- Risks becoming a dashboard nobody opens

3.35 / 5

CONCEPT B

STUDIO

An ideation co-pilot. Pick a goal and get on-brand ideas for series and ad angles, each with a hook, a reason and a one-click brief.

- + Solves idea block, writes briefs
- + Loved by the strategist and the maker
- Generic without real results behind it
- Trust depends on clear reasons

CORE OF THE FINAL CONCEPT

4.05 / 5

CONCEPT C

DROP ROOM

A calendar-first command centre. Each drop gets a room with a timeline, the organic plan, ad variations, shoot plan and approvals.

- + Matches how BLUORNG actually works
- + Joins organic and paid
- Weak on why and on new ideas
- Overlaps with Notion

3.60 / 5

21.1 CONCEPT EVALUATION MATRIX (SCORE 1-5, WEIGHTED)

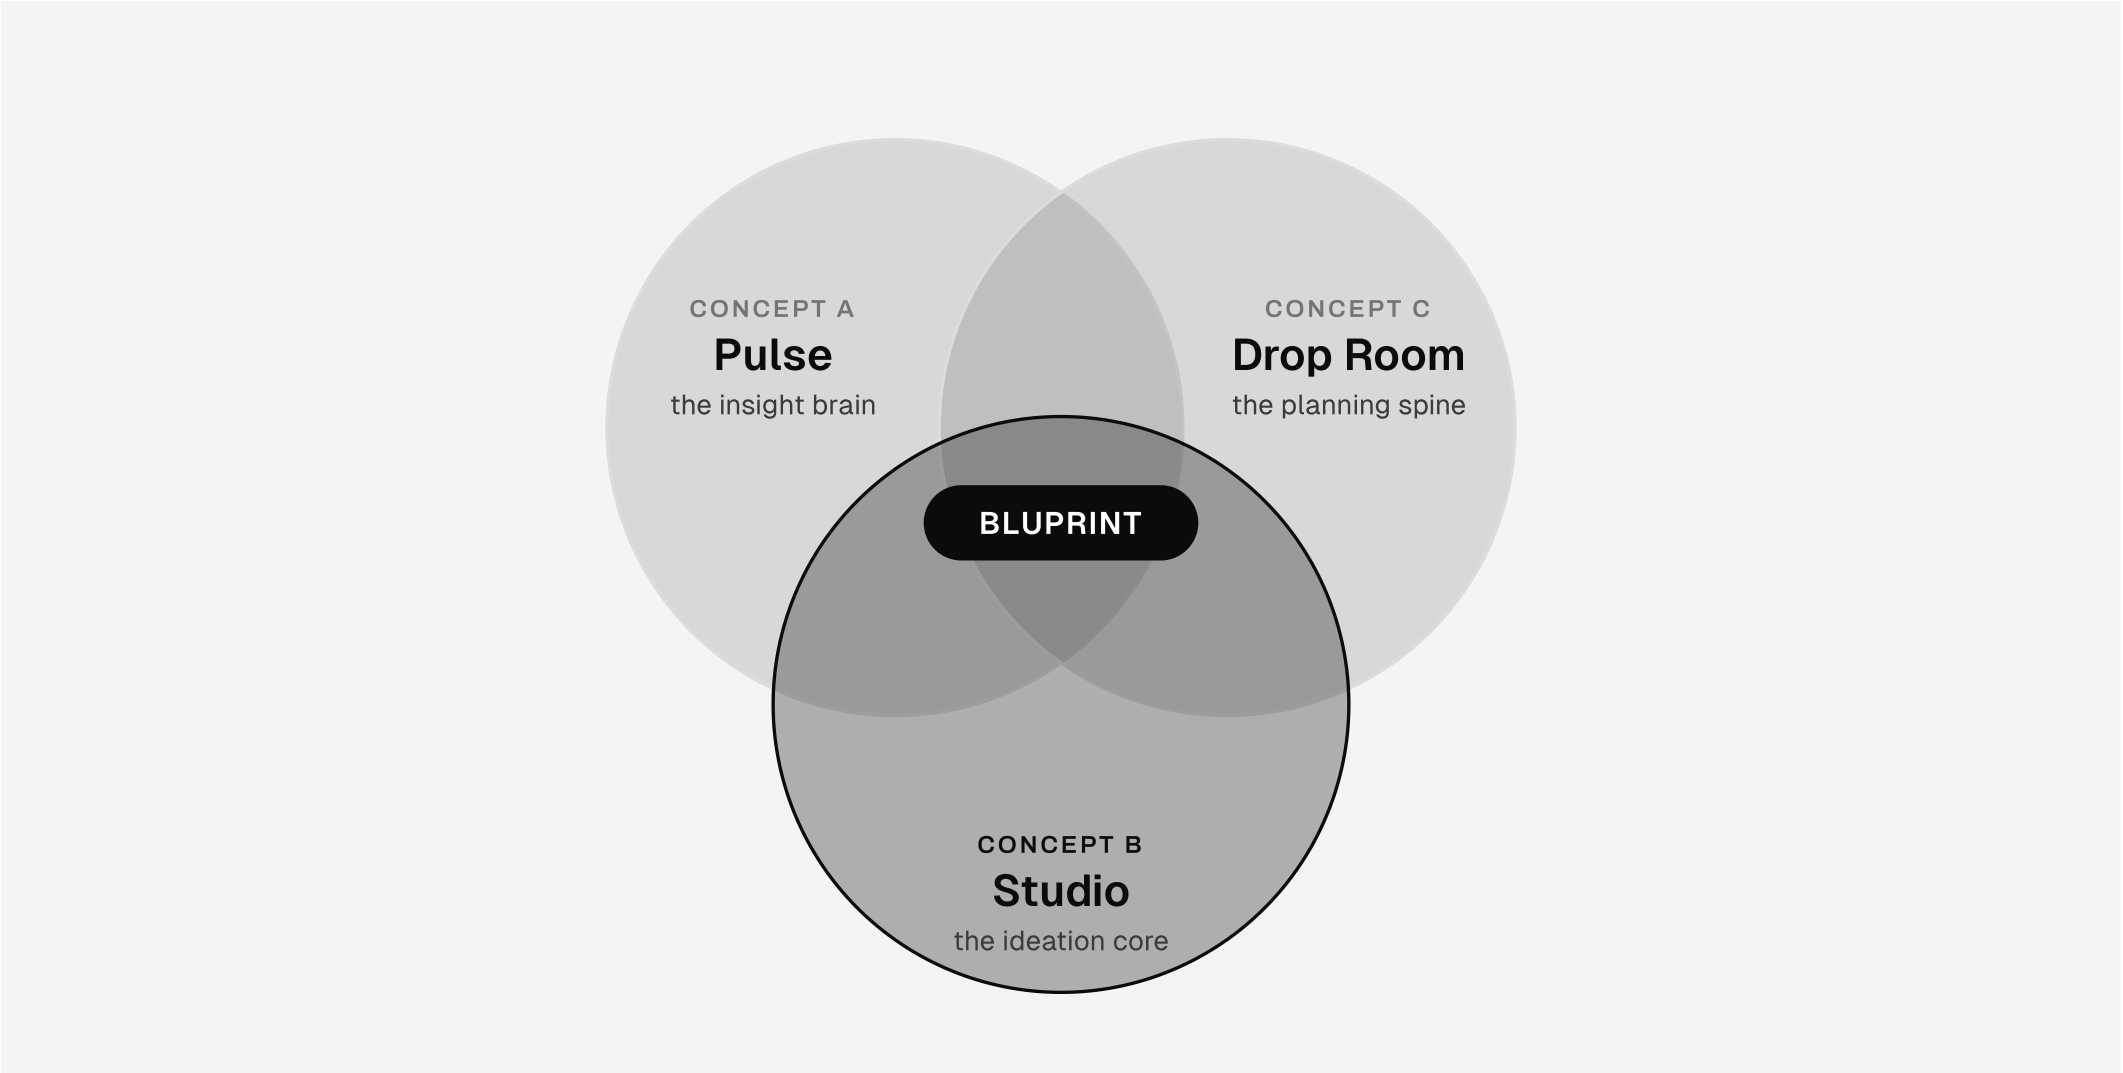

WEIGHTED SCORE OUT OF 5

DRAFT SCORES, RE-SCORE WITH MENTORS

CRITERION (WEIGHT)	A: PULSE	B: STUDIO	C: DROP ROOM
Solves "what to make" (25%)	3	5	2
Uses brand's own data (15%)	5	3	2
Organic ⇔ paid bridge (15%)	3	4	5
Brief/production help (10%)	1	5	4
Brand safety & trust (10%)	4	3	4
Fits workflow / adoption (10%)	2	4	5
Technical feasibility (10%)	5	4	5
Cost / time to build (5%)	4	3	5
Weighted total	3.35	4.05	3.60

(Re-score this table with your mentors and concept-probe participants. These are draft scores.)

22. FINAL CONCEPT: BLUPRINT = STUDIO CORE + PULSE BRAIN + DROP ROOM SPINE

FINAL DIRECTIONSTUDIO EXPERIENCE, POWERED BY PULSE, ORGANISED BY DROP

Selected direction: Concept B (Studio) as the core experience, powered by **A's insight engine** (so ideas come from real data, not generic AI) and organised on **C's drop timeline** (so it fits how BLUORNG works).

22.1 JUSTIFICATION

- Against research needs:** It addresses the top 3 priority areas (knowing what works → Pulse; ideation → Studio; organic ⇔ paid → Drop Room) and the adoption conditions (explainable, brand-safe, editable).
- Against viability:** - *Technology:* Instagram Graph API and Meta Marketing API provide post and ad metrics. LLMs can produce ideas and briefs. Tagging can start manually or semi-automatically. - *Cost/time:* An MVP can be built as a web app on existing APIs. No custom hardware. - *Process:* It fits the existing weekly planning and drop cycle; it doesn't replace people. - *Modularity:* Modules (Pulse, Ideas, Briefs, Plan, Brand DNA) can ship one at a time. - *Accessibility:* WCAG 2.2 AA, mobile companion for on-set use.
- Mentor input:** (Add: "Industry mentor emphasised...", "University guide suggested...")

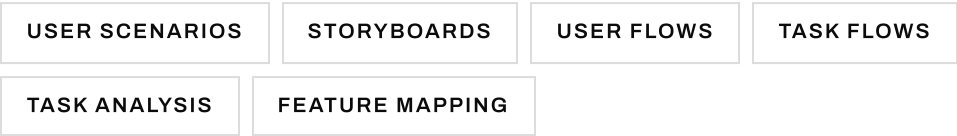

22.2 LOW-FIDELITY MOCK-UP PLAN

- Paper prototype of: Home (Ideas feed), Idea detail (with *why*), Brief builder, Drop timeline, Pulse board, Mobile set mode.
- Test with 3 team members using 3 tasks (see Part 7, Task Analysis).

SCENARIOS AND FLOWS

6 STAGES

How each person moves through BLUPRINT, step by step.

23. USER SCENARIOS

SCENARIO 1: RIA PLANS ORGANIC CONTENT FOR A DROP (PRIMARY)

Monday, 10 AM. The "Winter Capsule" drops in 12 days. Ria opens BLUPRINT on her laptop. The **Drop Room** already shows the drop date, synced from the design team. She opens **Ideas → Organic**. BLUPRINT suggests *"ASMR: Embroidery Close-ups, Ep. 4"*, with the reason: "Your ASMR series averages **2.6× saves** vs your median; last episode was 5 weeks ago." It also suggests a **Story Experience: "Pick the colourway"** poll for T-7. She tweaks the hook, sees a **Brand-fit 92%** badge, and adds both to the drop plan. Then she clicks **Create brief**.

SCENARIO 2: ARJUN PLANS AD VARIATIONS BEFORE THE SHOOT

Arjun opens the same Drop Room → **Paid**. The **Angle × Hook matrix** shows that last drop used only *Lookbook* and *Scarcity* angles. **Craft/Detail** and **Creator try-on** are flagged as "missing angles". BLUPRINT also spots that Ria's ASMR Reel is an organic winner and suggests "Promote as ad + shoot 3 alternate hooks". Arjun adds 4 angles × 3 hooks = 12 variations to the **shoot plan**, so Kabir shoots for them on the same day.

SCENARIO 3: KABIR ON SET

On shoot day, Kabir opens BLUPRINT on his phone in **Set Mode**. He sees one merged shot list (organic + ads) with hooks, ratios (9:16, 4:5), safe zones and reference frames. He ticks off shots as he goes. A note pops: "Shot 7 needs a 2-sec close-up for Hook B".

SCENARIO 4: FOUNDER APPROVAL

Siddharth gets a notification: "Winter Capsule plan ready: 9 organic, 12 ad variations." He swipes through cards on mobile. Each shows the idea, the *why*, a reference and the brand-fit score. He approves 8, comments "make the tone less meme-y" on one, and rejects one. BLUPRINT learns from the rejection.

SCENARIO 5: REVIEW & LEARN (POST-DROP)

At T+7, BLUPRINT's **Pulse** digest says: "Creator try-on ads had **38% lower CPA (indexed)** than lookbook ads; ASMR Ep. 4 is your top-saved post this month." It suggests next steps: "Make ASMR a bi-weekly IP" and "Brief 2 more creators for the next drop."

24. STORYBOARDS

Draw these as 6-frame comic strips (pen sketches are fine for jury).

Storyboard 1: "From idea block to drop plan" (Ria)

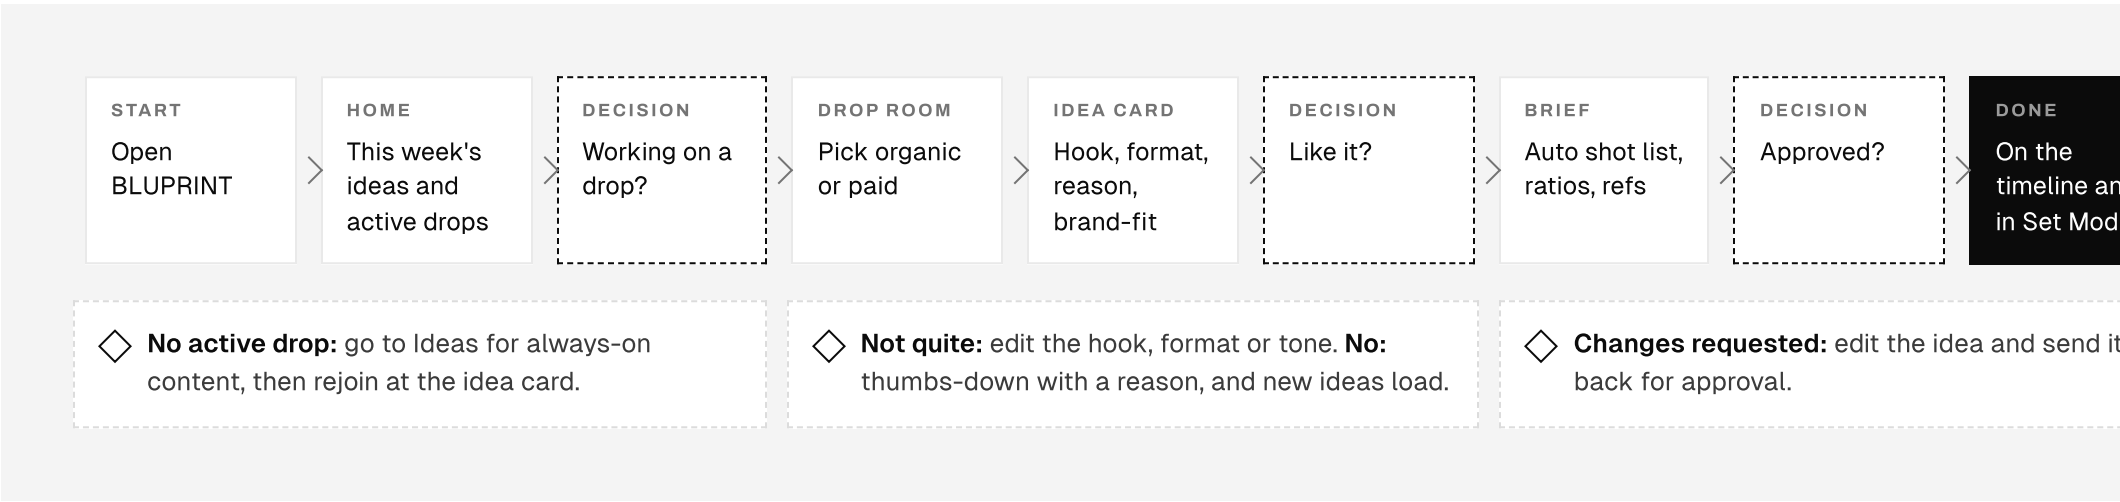

FRAME	VISUAL	CAPTION
1	Ria staring at a blank Notion page, phone buzzing with "drop in 12 days"	Idea block before a drop
2	Ria scrolling competitors, frustrated	Trend-chasing feels off-brand
3	Opens BLUPRINT → Drop Room	Everything for the drop in one place
4	Idea card: "ASMR Ep. 4: 2.6× saves" with <i>why</i>	Ideas based on what works for <i>us</i>
5	Taps "Create brief" → brief appears	Brief in one click
6	Ria relaxed; founder replies "Approved "	Confident, fast, on-brand

Storyboard 2: "One shoot, twelve ads" (Arjun + Kabir)

FRAME	VISUAL	CAPTION
1	Arjun looking at 3 near-identical ads, frequency 4.2	Creative fatigue
2	BLUPRINT matrix highlights "missing angles"	See the gaps
3	Arjun adds angles + hooks to shoot plan	Plan ads before the shoot
4	Kabir on set, phone in Set Mode, ticking shots	Clear shot list on set
5	Ads Manager with 12 varied ads	Real diversity
6	Pulse: CPA down, Arjun smiling	Learn and repeat

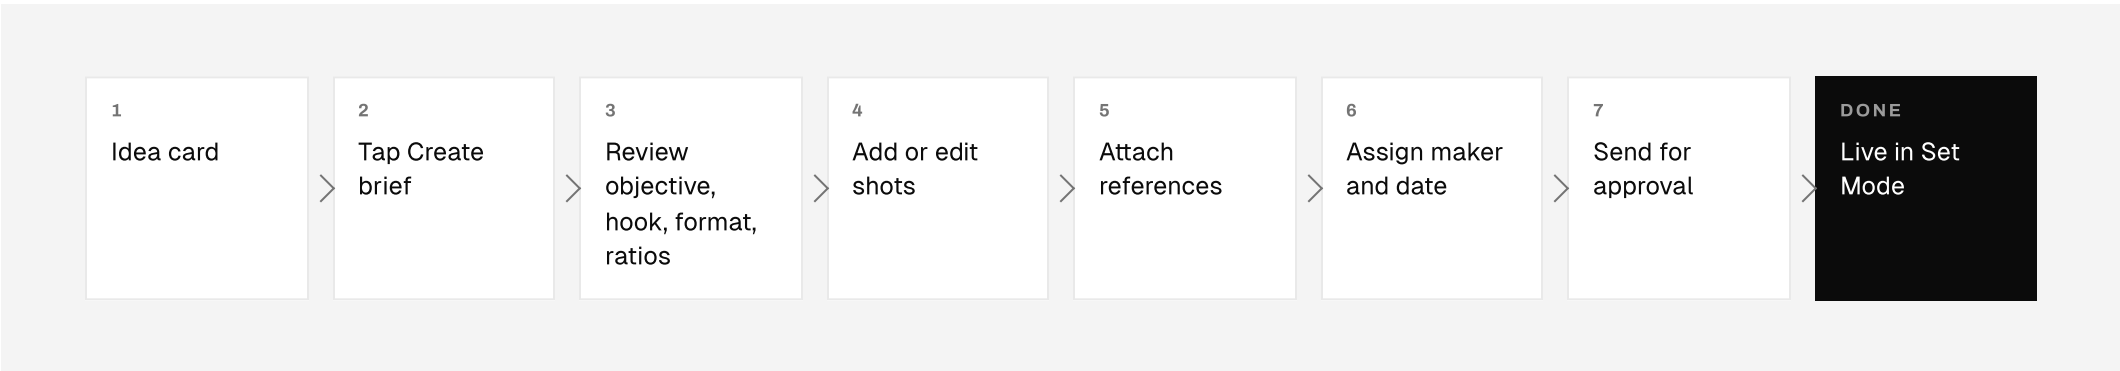

25. USER FLOWS & TASK FLOWS

25.1 PRIMARY USER FLOW: GET AN IDEA → BRIEF → PLAN

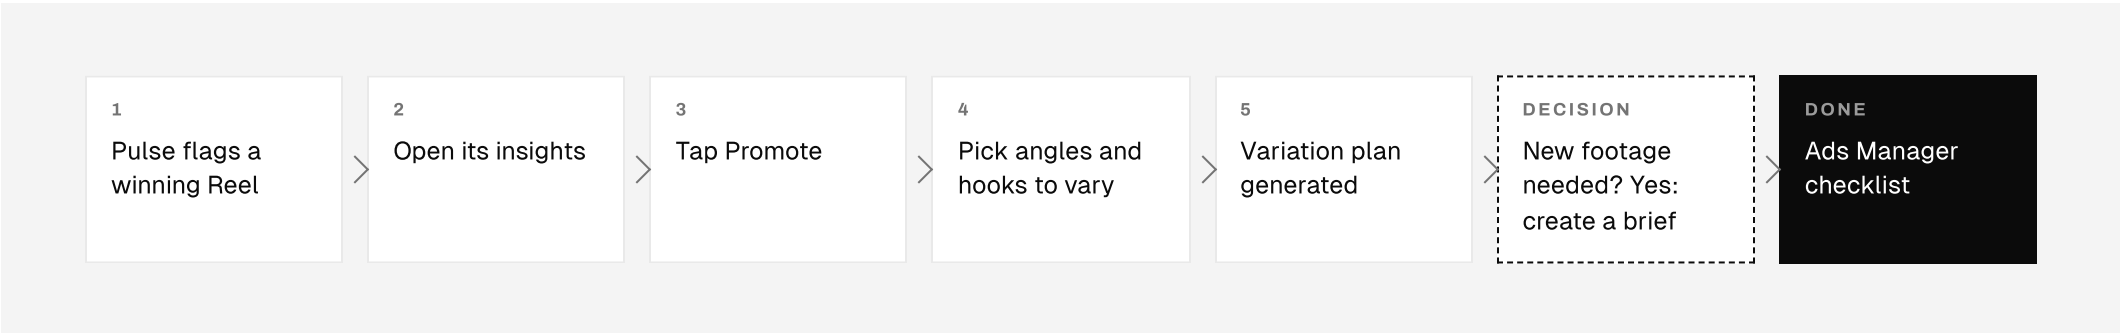

PRIMARY USER FLOW FROM OPENING THE APP TO A PLANNED, APPROVED SHOOT

25.2 TASK FLOW: CREATE A BRIEF FROM AN IDEA (LINEAR)

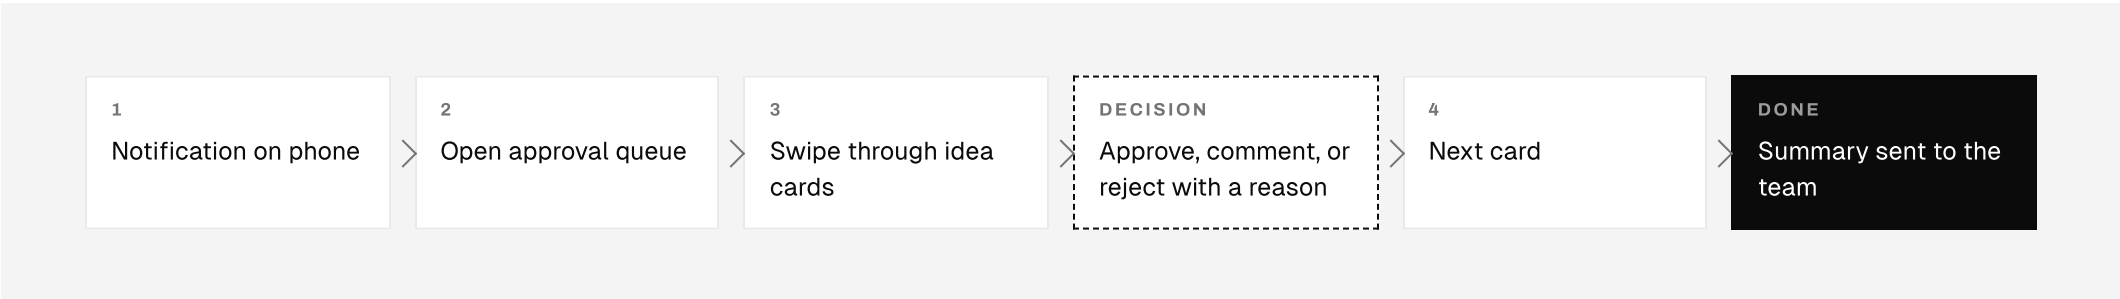

TASK FLOW: CREATE A BRIEF TARGET: UNDER 5 MINUTES

25.3 TASK FLOW: PROMOTE AN ORGANIC WINNER TO ADS

TASK FLOW: PROMOTE AN ORGANIC WINNER THE BRIDGE BETWEEN ORGANIC AND PAID

25.4 TASK FLOW: APPROVE A PLAN (FOUNDER, MOBILE)

TASK FLOW: APPROVE A PLAN FOUNDER, ON MOBILE, UNDER 10 MINUTES

26. TASK ANALYSIS

26.1 HIERARCHICAL TASK ANALYSIS (HTA): "PLAN CONTENT FOR A DROP"

0. Plan content for a drop
1. Open the drop
1.1 Open Drop Room from Home
1.2 Check drop date, products, goals
2. Get organic ideas
2.1 Open Organic tab
2.2 Filter by goal (hype / saves / reach)
2.3 Read idea card + "why"
2.4 Edit or give feedback
2.5 Add to plan
3. Plan paid variations
3.1 Open Paid tab → Angle × Hook matrix
3.2 Review missing angles + fatigue alerts
3.3 Select angles × hooks
3.4 Add to shoot plan
4. Create briefs
4.1 Create brief from idea
4.2 Review shot list, ratios, references
4.3 Assign maker & date
5. Get approval
5.1 Send plan to approver
5.2 Resolve comments
6. Execute & learn
6.1 Shoot with Set Mode
6.2 Publish / launch ads (outside BLUPRINT)
6.3 Review Pulse digest → feedback
Plan 0: do 1 → (2 and 3 in any order) → 4 → 5 → 6

26.2 TASK TABLE (FOR USABILITY TESTING LATER)

TASK	USER	FREQUENCY	CURRENT TIME (EST.)	TARGET TIME	KEY SCREEN
Find which content type worked best last month	Ria, founder	Weekly	30–60 min (manual)	< 1 min	Pulse
Get 5 organic ideas for a drop	Ria	Weekly	1–2 hrs	< 10 min	Ideas → Organic
Plan 10 ad variations	Arjun	Per drop / bi-weekly	1 hr + waiting	< 15 min	Paid matrix
Create a brief	Ria/Arjun	5–10× per drop	20–30 min	< 5 min	Brief builder
Use brief on set	Kabir	Shoot days	–	Glanceable	Set Mode (mobile)
Approve a plan	Founder	Per drop	Days (WhatsApp)	< 10 min	Approval queue (mobile)

Current times are estimates. Replace them with times observed during shadowing.

27. FEATURE MAPPING

FEATURE	USER NEED (FROM RESEARCH)	PERSONA	DESIGN GOAL	PRIORITY	MODULE
Auto-tagging (format, IP, hook, emotion, goal)	Know what works by type	Ria, Arjun	G1	Must	Pulse
"Why it worked" cards	Meaning, not numbers	Ria, Founder	G1, G2	Must	Pulse
IP leaderboard	Compare series	Ria	G1	Must	Pulse
Weekly digest	No manual reports	Ria, Founder	G7	Should	Pulse
Organic idea recommender (IPs, formats, stories)	Idea block	Ria	G2	Must	Ideas
Story Experience builder	Interactive stories	Ria	G2	Should	Ideas
Angle × Hook matrix + missing angles	Ad diversity	Arjun	G3	Must	Ideas → Paid
Fatigue alerts	Late detection	Arjun	G3, G7	Should	Pulse → Paid
Promote winner	Organic → paid	Arjun	G3	Must	Pulse/Ideas
Explain-why + edit + feedback	Trust	All	G2, G7	Must	All

FEATURE	USER NEED (FROM RESEARCH)	PERSONA	DESIGN GOAL	PRIORITY	MODULE
One-click brief + shot list	Clear briefs	Ria, Kabir	G4	Must	Briefs
Set Mode (mobile)	On-set use	Kabir	G4, G8	Should	Briefs
Drop Room + timeline	Plan around drops	Ria, Arjun	G6	Must	Plan
Approval queue (mobile)	Fast approvals	Founder	G5, G8	Should	Plan
Brand DNA + brand-fit score	Protect the cool	Founder	G5	Must	Brand DNA
Trend radar (brand-filtered)	Trends without losing brand	Ria	G2, G5	Could	Ideas
Comment/DM question mining	Audience voice	Ria	G2	Could	Pulse

INFORMATION ARCHITECTURE

6 STAGES

How the product is organised, named and navigated, and the final proposal.

28. CONTENT STRATEGY & ANALYSIS

28.1 CONTENT GOALS OF THE PRODUCT

1. **Answer one question fast:** *"What should we make next, and why?"*
2. Turn data into **plain-language guidance** (no analytics jargon for makers and founders).
3. Keep **brand voice** visible everywhere (BLUORNG tone, not generic AI tone).

28.2 CONTENT INVENTORY (WHAT INFORMATION LIVES IN BLUPRINT)

CONTENT OBJECT	CONTAINS	SOURCE	UPDATED
Post / Ad	Media, caption, date, metrics, tags	IG Graph API, Meta Marketing API	Daily
Tag set	Format, IP/series, hook type, emotion, goal, angle	Auto + manual	On import
Insight	Finding + evidence + comparison to median	Pulse engine	Weekly / on demand
Idea	Title, format, IP, hook, why, brand-fit score, refs, goal	Ideas engine + team	Weekly + on request
Brief	Objective, idea, shot list, ratios, refs, caption draft, owner, deadline, usage rights	Generated + edited	Per idea
Drop	Name, date, products, goals, timeline, linked ideas/briefs	Design team / manual	Per drop
Brand DNA	Tone words, do's & don'ts, visual refs, banned words/topics, colour & type rules	Founder + team	Rarely
Approval	Status, comments, approver	Team	Per idea/plan

28.3 CONTENT TYPES FOR RECOMMENDATIONS (TAXONOMY USED ACROSS THE PRODUCT)

- **Organic formats:** Reel, Carousel, Static, Story, Story Experience (interactive), Collab post, Broadcast message
- **Organic IPs (series):** Drop Countdown, Lookbook / Campaign Film, ASMR, Studio Diaries, One Piece Three Ways, Fit Check, Collab Universe, Culture Drop, Founder POV, UGC Wall
- **Paid angles:** Scarcity/Drop, Craft & Quality, Social Proof, Creator / UGC, Lookbook Carousel, Retargeting/DPA, Store Footfall, Collab Announce
- **Hook types:** Visual shock, Close-up detail, Question, Text overlay claim, Sound-led (ASMR), POV, Behind-the-scenes reveal, Countdown
- **Goals:** Hype, Reach, Saves, Shares, Sales, Footfall, Recall

28.4 VOICE & TONE OF THE UI

DO	DON'T
Short, confident, culture-aware ("This one hit. Make more.")	Corporate ("Engagement metrics indicate...")
Explain with evidence ("2.6× your median saves")	Vague ("Performing well")
Suggest ("Try...", "Consider...")	Command ("You must post...")

29. ORGANISATION

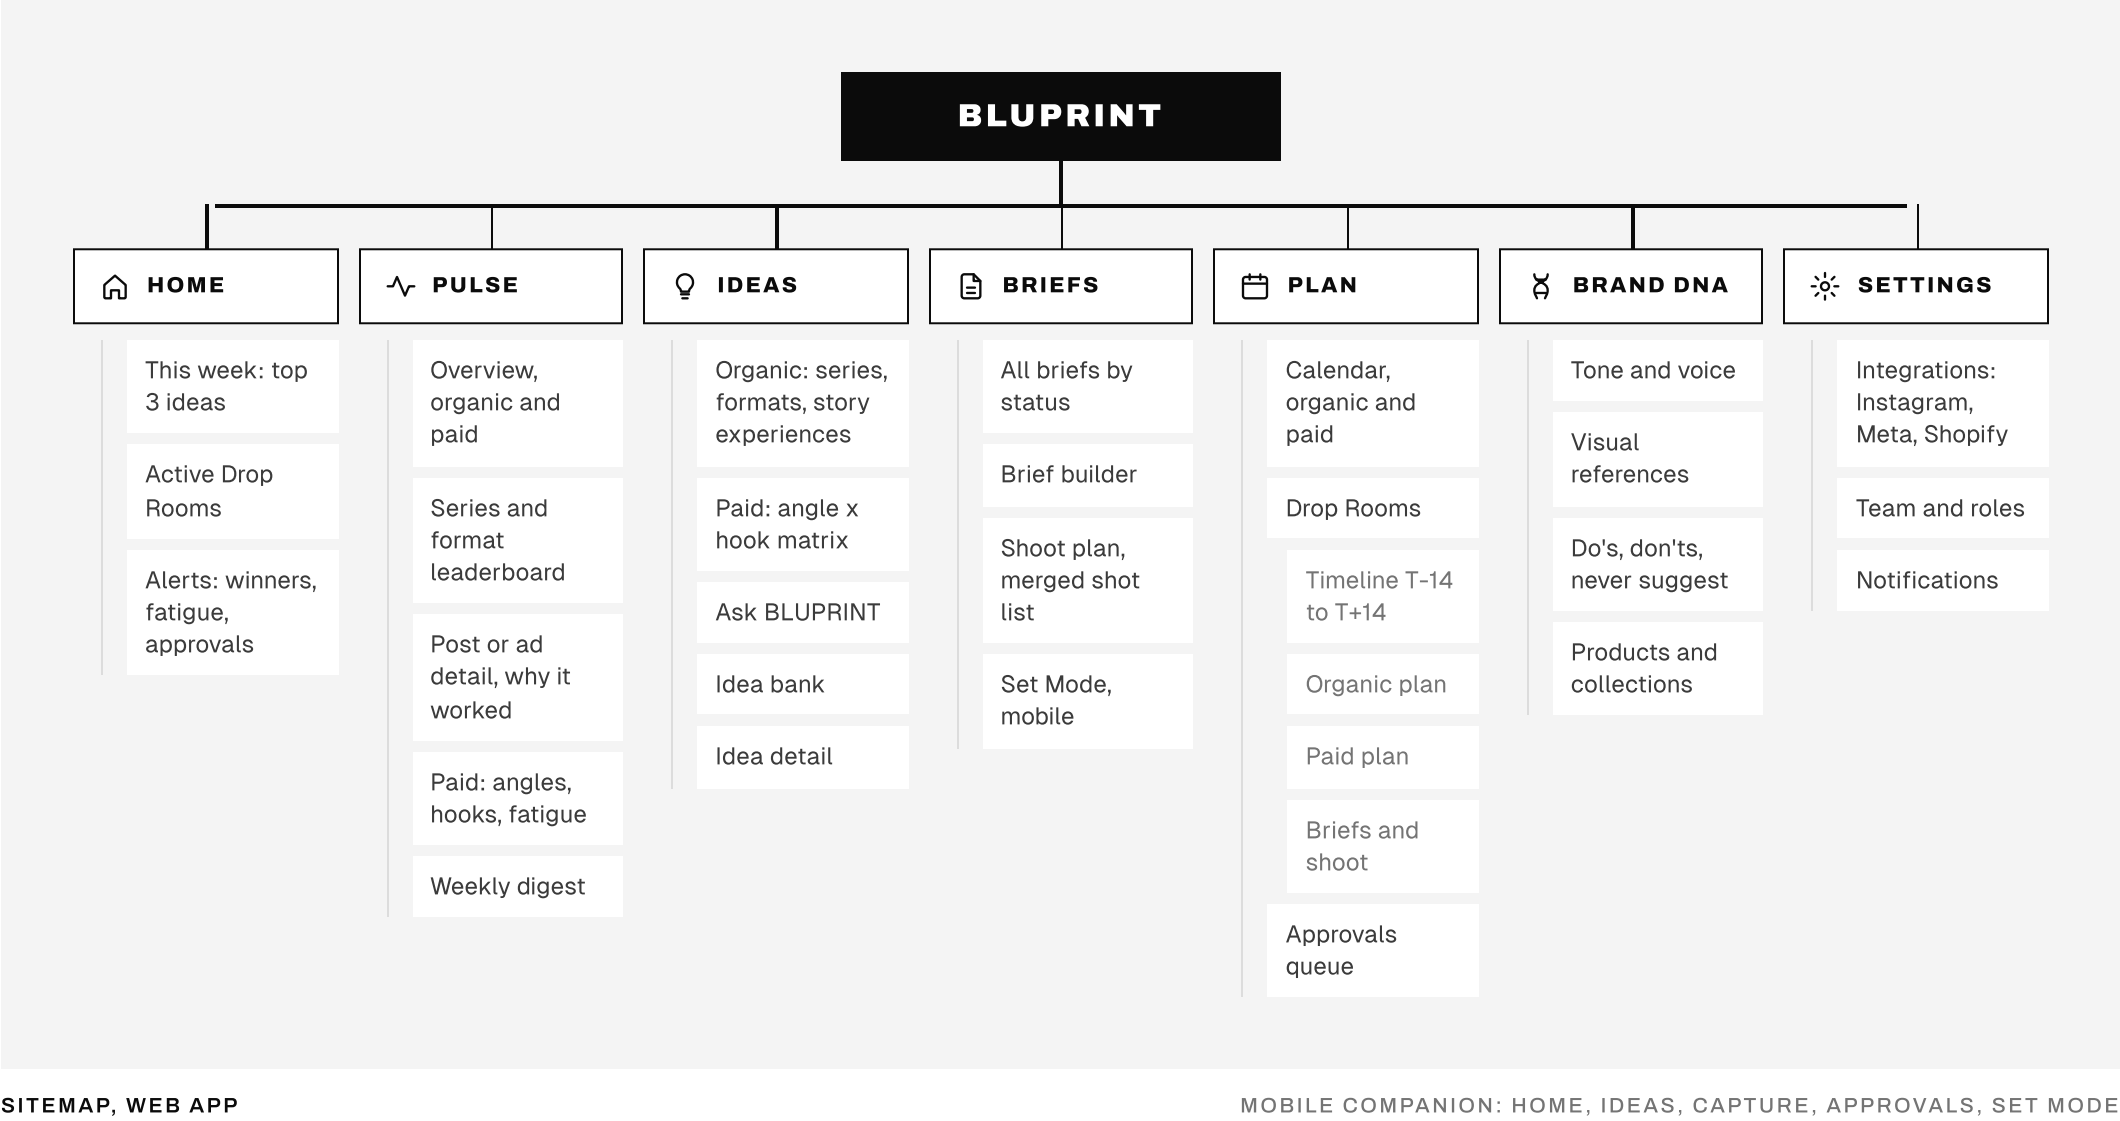

29.1 ORGANISATION SCHEMES

SCHEME	USED FOR
Task-based (primary)	Top-level navigation: Pulse → Ideas → Briefs → Plan
Time-based	Drop timeline (T-14 ... T+14), calendar
Topic-based	Content type / IP / angle filters
Audience-based	Organic vs Paid tabs

29.2 CARD SORTING PLAN (TO VALIDATE LABELS AND GROUPS)

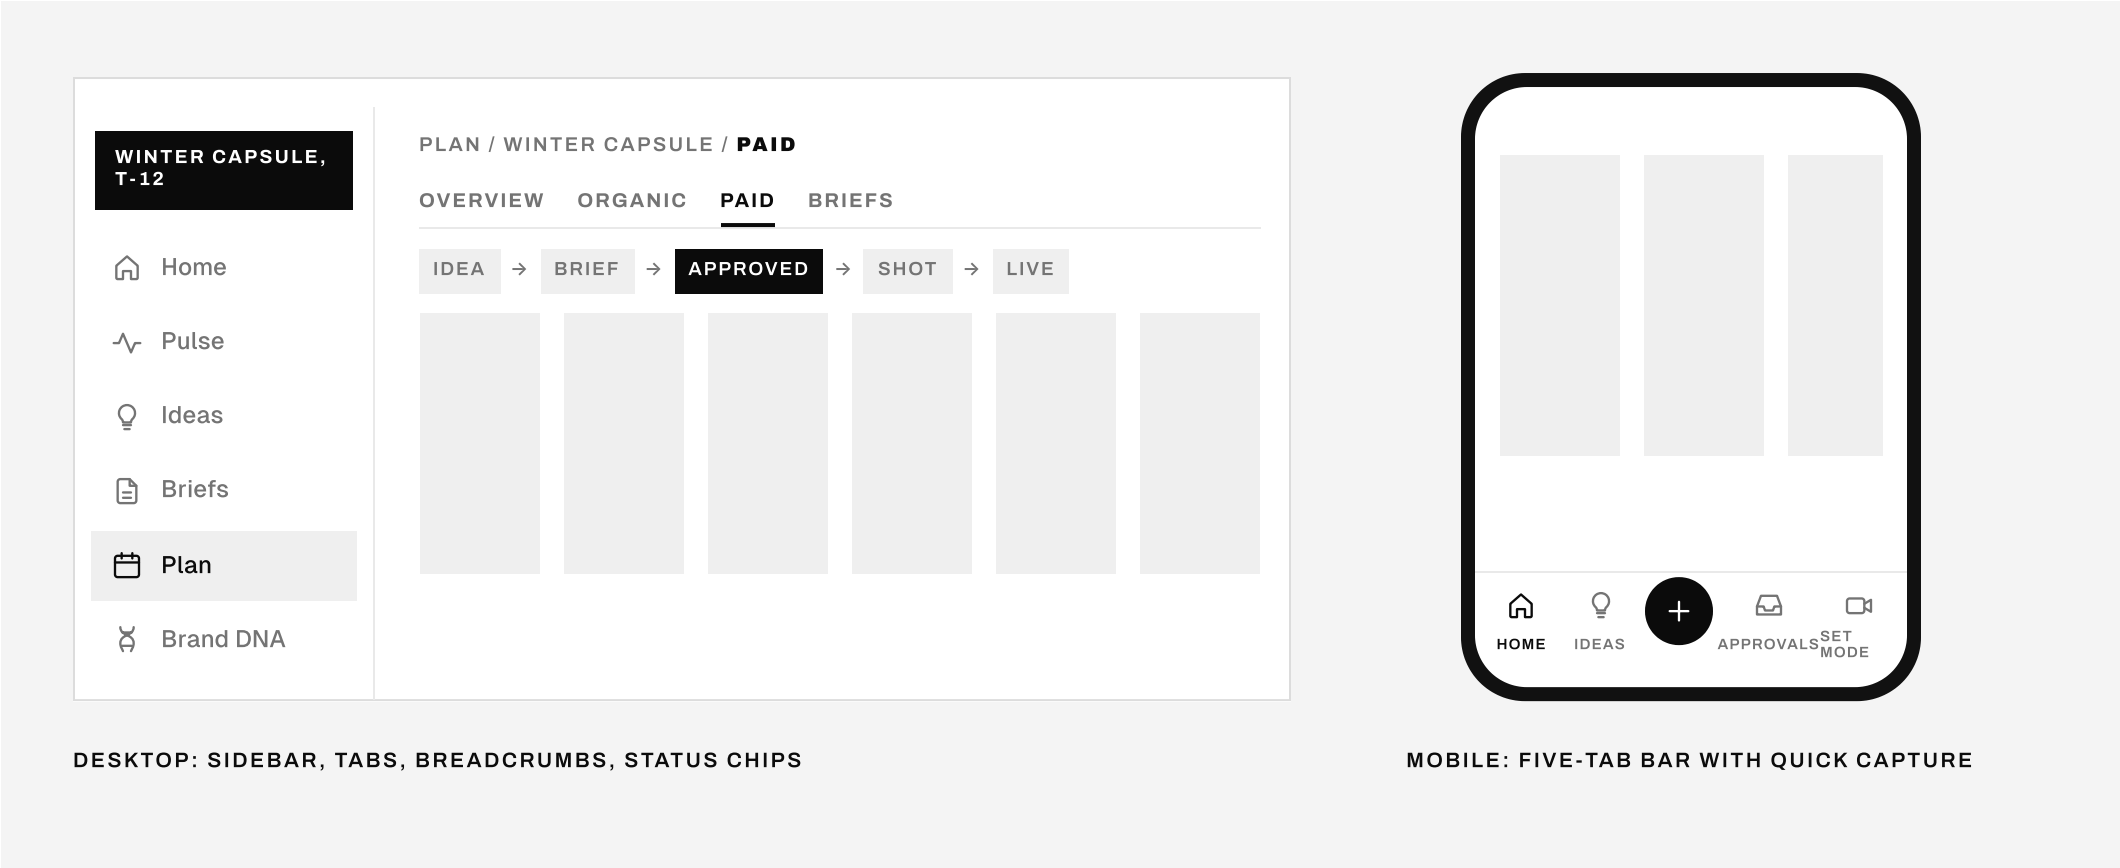

- **Open card sort** with 6–8 team/practitioners: 30 cards (e.g. "IP leaderboard", "Fatigue alert", "Shot list", "Brand-fit score"). Let them group and name the groups.
- **Closed card sort** with 10+ to confirm the final top-level groups.
- Tools: Optimal Workshop, Maze or paper cards. Output: similarity matrix → confirm the sitemap.

30. STRUCTURING: SITEMAP

Mobile companion (subset): Home, Approvals, Set Mode, Ideas (quick capture), Pulse digest

31. NAVIGATION

LEVEL	DESKTOP (PLANNING)	MOBILE COMPANION (SET & APPROVALS)
Global	Left sidebar: Home, Pulse, Ideas, Briefs, Plan, Brand DNA, Settings, plus Drop switcher at the top	Bottom tab bar (5): Home, Ideas, + Capture , Approvals, Set Mode
Local	Tabs inside modules (e.g. Ideas: Organic / Paid / Bank)	Segmented controls
Contextual	"Create brief", "Promote", "Add to drop" buttons on cards; cross-links Insight ↔ Idea ↔ Brief	Swipe actions on cards
Utility	Search (⌘K), notifications, profile	Search, notifications
Breadcrumbs	Plan › Winter Capsule › Paid	–
Wayfinding	Active drop pinned in the header; status chips (Idea → Brief → Approved → Shot → Live)	Progress bar in Set Mode

Navigation principles: max 7 top-level items, every insight links to an action, drop context is always visible, ≤ 3 clicks from Home to a brief.

32. LABELING

LABEL	MEANING	ALTERNATIVES CONSIDERED	WHY CHOSEN
Pulse	Performance insights	Analytics, Dashboard, Insights	Short, energetic, feels "alive", less intimidating for makers. <i>Test vs "Insights"</i>
Ideas	Recommendations	Suggestions, Recommendations, Studio	Plain and action-oriented
Briefs	Shootable briefs & shot lists	Tasks, Production, Jobs	The team already says "brief"
Plan	Calendar + drops + approvals	Calendar, Schedule	Covers more than dates
Drop Room	Workspace per drop	Campaign, Project	Matches streetwear culture ("drops")
Brand DNA	Brand guardrails	Brand guide, Rules	Memorable; signals identity
IP / Series	Recurring content format	Show, Segment, Pillar	"IP" is used in-house; tooltip: "a repeatable series"
Angle	Ad message strategy	Concept, Theme	Standard performance-marketing term
Hook	First 1–3 seconds	Opener, Intro	Industry standard
Brand-fit	How on-brand an idea is (0–100)	Brand score, Vibe check	Clear; "Vibe check" kept as a playful tooltip
Why this?	Explanation of a recommendation	Reason, Rationale	Conversational and inviting
Promote	Turn organic into ad	Boost, Amplify	"Boost" means a specific Meta feature, so we avoid confusion

LABEL	MEANING	ALTERNATIVES CONSIDERED	WHY CHOSEN
Set Mode	On-set mobile view	Shoot view, Checklist	Short; set = film set

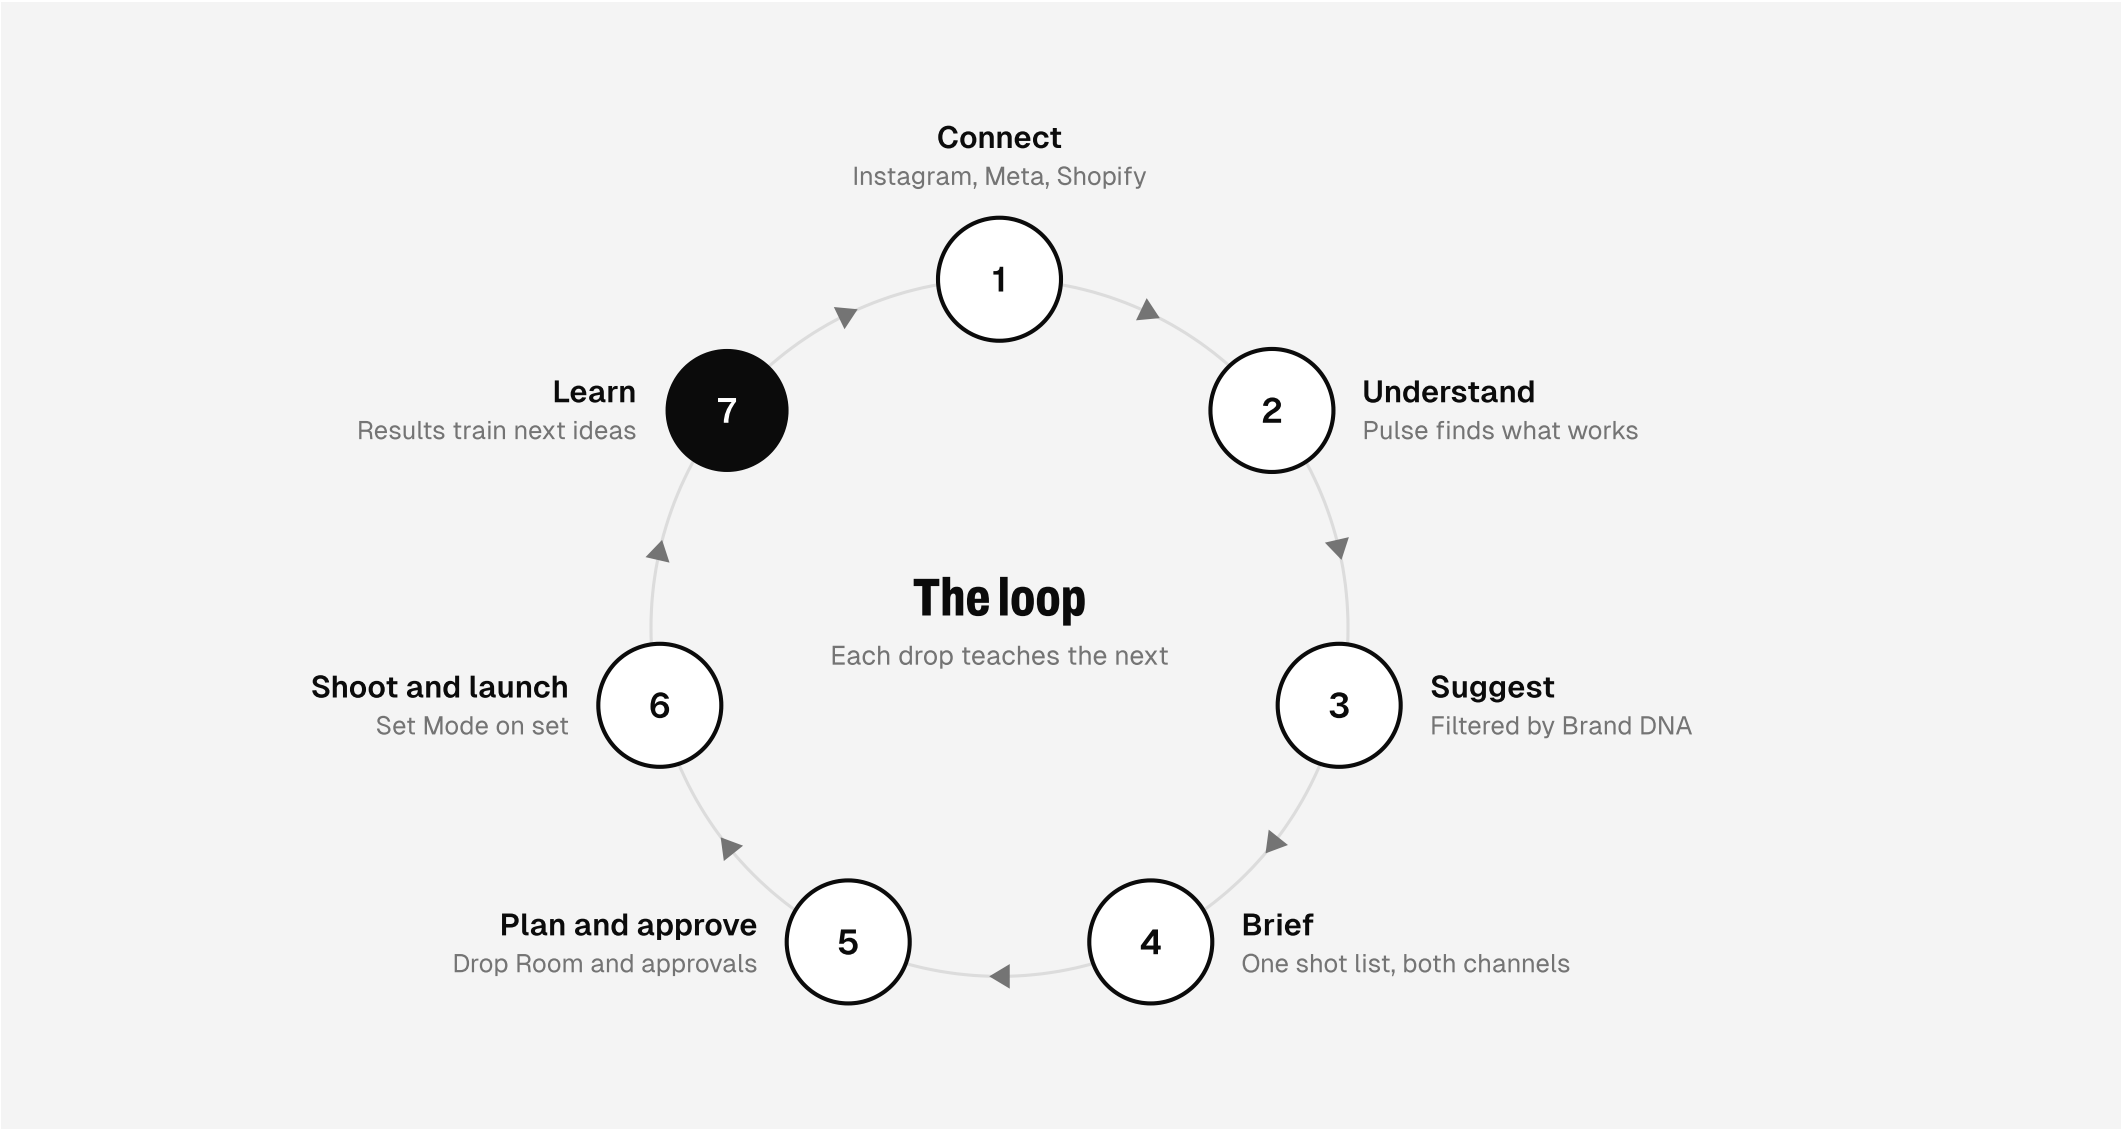

Labels to validate in card sorting and first-click tests: Pulse vs Insights, IP vs Series.

33. PROPOSED SOLUTION: BLUPRINT

33.1 ONE-LINER

BLUPRINT tells BLUORNG's content team what to make next, for Instagram and Meta ads, and why, then turns it into a brief they can shoot.

33.2 HOW IT WORKS

HOW BLUPRINT WORKS

SEVEN STEPS, REPEATED EVERY DROP

33.3 CORE MODULES

MODULE	WHAT IT DOES	ORGANIC	PAID
Pulse	Shows what worked & why, by content type	IP leaderboard, format/hook performance, saves/shares	Angle/hook CPA (indexed), fatigue, winners
Ideas	Explainable, brand-fit recommendations	IPs (ASMR, Story Experience, Studio Diaries...), formats, hooks, culture moments	Angle × Hook matrix, missing angles, variation plans, promote-winner
Briefs	Brief + shot list + Set Mode	Reels/carousel/story briefs	Variation shot list, ratios, safe zones, creator briefs
Plan	Drop Rooms, calendar, approvals	Content timeline	Ad lighting & refresh dates
Brand DNA	Guardrails for every suggestion	Tone, visual refs, never-suggest	No discount-led ads, premium tone

33.4 PLATFORMS

- Web app (desktop-first): planning, analysis, ideation.
- Mobile companion (iOS/Android): approvals, Set Mode, quick idea capture, digest.

33.5 VALUE SUMMARY

STAKEHOLDER	BEFORE	AFTER (TARGET)
Social media manager	Guessing, idea block, manual reports	Data-backed ideas weekly, auto digest
Performance marketer	3 similar ads per drop, late fatigue	10+ planned variations, early alerts

STAKEHOLDER	BEFORE	AFTER (TARGET)
Maker	WhatsApp voice-note briefs	Clear shot list on phone
Founder	Approvals scattered, brand risk	One queue, brand-fit score, rationale
Business	Spend on guesswork	More repeatable wins, better CPA, stronger recall

33.6 NEXT STAGES (AFTER THIS DOCUMENT)

Wireframes → paper prototype test → design system (colour, type, icons) → style guide & interaction patterns → accessibility (WCAG 2.2 AA, iOS HIG, Material 3) → grids → wireflows & digital prototype → usability testing (2 rounds).

BLUPRINT	CHAPTERS	SOURCES	NOTES
A content intelligence and ideation platform for BLUORNG's Instagram and Meta ads. A UI/UX graduation project, not an official BLUORNG page.	The brief	Deep Market Insights	Screen numbers are examples
	Secondary research	Dash Social, Socialinsider	Primary research slots are filled from fieldwork
	Systems and problems	Meta via B&T	Internal data used with mentor approval
	Primary research	Indian Retailer, Fibre2Fashion	
	People and problem	Full list in Part 2	
	Ideas to direction		
	Scenarios and flows
